

## EndoSan5™ Water Treatment Chemical - 20-05-001

1ltr

EndoSan5™ is a solution of hydrogen peroxide which is stabilised using a specially formulated silver based chemistry and it is the most advanced silver stabilised hydrogen peroxide water treatment available on the market, making it the perfect product for use with your Tank Shower.

An ecological disinfectant product based on activated and stabilised hydrogen peroxide, the unique composition makes it safe for people and the environment, providing a real alternative to products based on halogens, chlorine, bromine or iodine and aldehydes, phenols, quaternary ammonium compounds and others.

Equally effective against both gram positive and gram negative bacteria and active against all types of fungi, viruses, moulds, spores and amoebae, it removes the organic deposits and biofilm in the water, so that the probability of new sources of infection are dramatically reduced, if not extinguished completely. Its high efficiency is due to the in-depth action of special additives which prevent the spontaneous breakdown of the hydrogen peroxide.

In the presence of micro-organisms EndoSan5™ increases its biocidal activity by forming high energetic active oxygen, guaranteeing a long-lasting disinfection.

EndoSan5™ is environmentally friendly as the active ingredient is hydrogen peroxide, a chemical compound hybrid of hydrogen and oxygen. During the disinfection it decomposes into water and oxygen and therefore no dangerous substances are formed. It is colourless, odourless and miscible with water at all ratios and it doesn't cause any change in smell or taste when it comes into contact with water.

### SPECIFICATION

Tub Quality	1ltr
Container size	H223mm x 88.5mmØ
Weight	1.1kg

For EndoSan5™ products the ppm ratio is 50, please see the EndoSan - Method Statement and Risk Assessments form for full details.
