

Auto Dumping Container - ADC7L

0.7m³ on legs

Manufactured with steel plate sides and a steel plate base, this unit is not only robust, but extremely practical too. It can be moved by hand pallet truck, or of course by forklift truck, it is totally automatic, no wires, no climbing, just lower onto the edge of a skip to open and re-lower after dumping to close. The unit comes complete with safety securing chain.

IMPORTANT INFORMATION: This unit is not designed for use with wet loads as they will leak from the base of the unit and could also cause overloading issues resulting in significant damage to the locking mechanism, which would affect your warranty rights.
