

Auto Tipping Skip on Castors - ATS5C

0.5m³ on castors

Manufactured from steel plate with oil tight welds the skip has a dampened tipping action, which is controlled from the safety of the cab (no wires to pull no climbing on the mast of the forklift truck) It automatically releases by lowering onto the edge of the skip and re-locks by lowering again after the load has been tipped. The unit comes complete with 2 fixed, 2 swivel nylon castors and safety securing chain.

IMPORTANT INFORMATION: This unit is not designed for use with wet sand, cement, concrete or other similar "wet loads" because of the potential to overload it and cause significant damage to the locking mechanism, which would affect your warranty rights.

SPECIFICATION	
External size	L1450 x W820 x H905mm
Nominal volume	0.5m ³
Maximum load	800kg
Colour	Blue RAL 5019
Tare weight	165kg
