

Drum Storage Compound - DC160

The compound is built to accommodate 160 x 205ltr drums on pallets in 36 pallet locations with a modular design comprising of two double, twin compartments with push back loading and one twin two tier compartment arranged in a horseshoe configuration, with twin sliding front doors and a central roof. All the pallet locations are accessed internally and the entire structure is roofed to protect the contents from the elements. Constructed from modular units manufactured with 80 x 80mm RHS frame, with fully seam welded sumps, corrugated sides and back panel. The sumps are braced with additional profiled ribs and fitted with galvanised support channels. Full width plinths are fitted to the underside to eliminate contact with the ground. Each section is shot blasted before being painted and the underside of the sumps are given a coat of bitumen sealer.

NOTE: Grid mesh is available for the shelving in the unit as a chargeable option; please contact us for further information.

You will need to supply a sound level concrete base a minir of 200mm thick to which the units will be bolted di construction

The compound will be manufactured specifically to requirements. We are therefore unable to accept any cancells or return once the order has been accepted. Please do check all dimensions and suitability prior to ordering.

This unit will be delivered by an HGV, possibly articul therefore please ensure that a vehicle of this type can ac your premises before ordering and advise us accordingly. will require an appropriate size/capacity fork lift truck to off this item from the delivery vehicle. Our standard delivery doe include any offloading.
