

Skip Canopy - SCZ

Built to order

Our skip canopies offer an effective solution to the secure weatherproof storage of waste. A solid H beam frame with optional sump forms a rigid base to hold the tubular frame of the canopy, which runs on easy glide tracks. The canopy, in two or more parts, slides giving full access to the waste skip for loading or removal. The canopy is clad with corrugated plastisol sheeting to blend into the surrounding area.

Options include; Configuring the unit to accommodate side by side or line astern skips, fully seam welded sumps to contain leaking liquids, door systems to allow you to control access and fully contain the contents (stop wind from blowing unsecured waste around the site). There is also a choice of cladding panel colours.

You will require a firm level concrete base to locate the unit on (not supplied by Empteezy).

Please contact us to arrange a free, confidential site visit to discuss your project.
