### Footnotes:

(-) = Not Detected, the measured value was below the detection limit of 0,01 % respectively 100 mg/kg.

For the calculations of the equivalence sums, the respective acid forms were multiplied by the factor of 0.877 to infer the equivalent amount of the neutral forms.

Method of Analysis: HPLC-UV-Vis (High Performance Liquid Chromatography). All measurement methods were calibrated and controlled with certified reference materials (CRM). The measurements with HPLC were carried out strictly according to the validated method.
