2. [Install Mac Os On Virtualbox](#)

Current macOS version: High Sierra (10.13), tested with VirtualBox 5.2.16 r123759 Enabling virtual machine Guest Additions on a Mac host and Mac guest. Ask Question Asked 3 years, 7 months ago. Global Nav Open Menu Global Nav Close Menu; Apple; Shopping Bag +.

Umair

We offer open-source (Linux/Unix) virtual machines (VDIs) for VirtualBox, we install and make them ready-to-use VirtualBox images for you. From here you can download and attach the VDI image to your VirtualBox and use it. We offer images for both architectures 32bit and 64bit, you can download for free for both architectures. At the moment we have plans to offer you 30+ Linux/Unix distributions, we may add more to our list in near future, you can also send us suggestions if we are missing any popular distribution from our list. You can check FAQs for Credentials(*Username & Password*) for VDI images. Here you can follow the guide how to attach/configure VDI image with VirtualBox. We do not install 'Guest Additions' in the OS or add any kind of stuff, read our privacy policy.

VirtualBox is the most easiest way to run secondary OS on your primary operating system, If your hardware doesn't allow you to install any other operating system then VirtualBox comes in hand. It is a free and powerful x86 and AMD64/Intel64 virtualization product available for most of the operating systems such as Linux, Microsoft Windows, Mac OS X, Solaris and ported version for FreeBSD. Read wiki about VirtualBox.

You can follow our blog for new images we release for VirtualBox.
