

Track Your Applications

Spreader Settings

These are the recommended spreader settings for the products we carry. These are starting points. Think of them as suggestions, not hard and fast rules. This is because the spreaders below are cheaper in quality and may not be always adjusted the same as the factory would have them set. So please use the spreader settings below as the start of your own testing and calibration.

Here is a video showing you how to calibrate your spreader based on the recommended spreader setting:
