Apple Pollination

An apple variety can generally pollinate any apple within the same column or either adjacent column. Apples with an asterisk () are triploids and cannot pollinate other trees and require two varieties within the same column or either adjacent column. Crabapples are common pollinators and the varieties we sell are listed within their respective columns.*

Early	Early Midseason	Midseason	Late Midseason	Late Season
Gravenstein*	Dandee Red	Ashmead's Kernel	Ambrosia	Brown's Snout
