Apache NetBeans Releases Page. Our annual May/June release is a long-term support (LTS) release that benefits from our NetCAT community testing process, and remains available and supported for a year. Our other quarterly releases provide early access to new features, which are tested and consolidated in the subsequent LTS release. Download the latest version of Apache NetBeans for Mac. Java, C and Ruby application development from your Mac. NetBeans IDE is an integrated, multi-platform. Apache NetBeans 12.0 runs on the JDK LTS releases 8 and 11, as well as on JDK 14, i.e., the current JDK release at the time of this NetBeans release. Community approval As in any other Apache Project, the Apache NetBeans Community approved this release through.

Apache NetBeans is free and open source and is governed by the Apache Software Foundation.

Fast & Smart Editing

Apache NetBeans is much more than a text editor. It highlights source code syntactically and semantically, lets you easily refactor code, with a range of handy and powerful tools.

Java, JavaScript, PHP, HTML5, CSS, and More

Apache NetBeans provides editors, wizards, and templates to help you create applications in Java, PHP and many other languages.

Cross Platform

Apache NetBeans can be installed on all operating systems that support Java, i.e. Windows, Linux, Mac OSX and BSD. Write Once, Run Anywhere, applies to NetBeans too.

What's New:

Enhancements

Performance

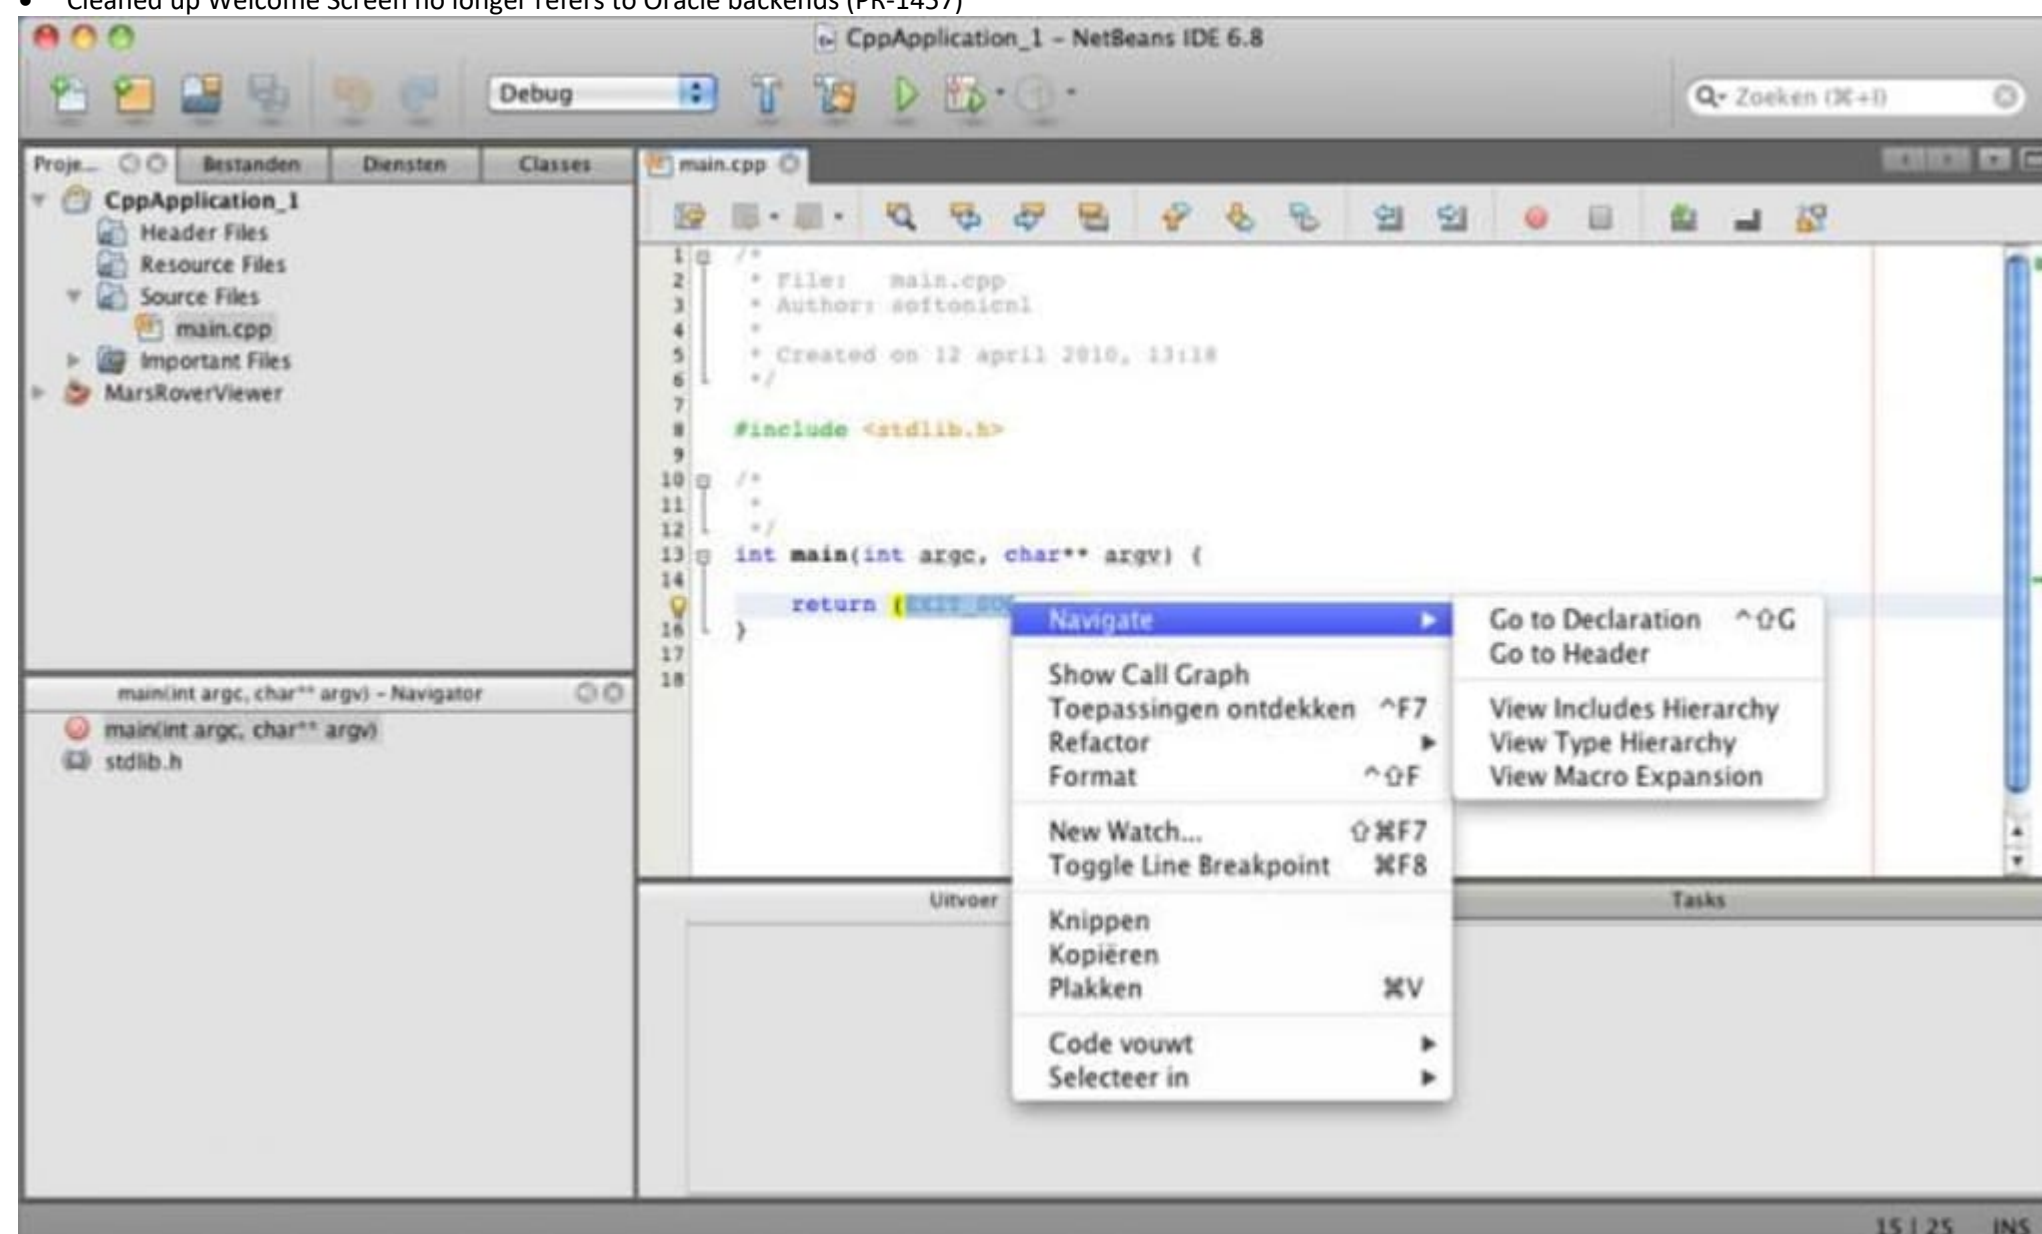

- Speed up finding binaries for source files, most notable performance increase on refactoring. (PR-1430)
- Using Java NIO2 Watchers on Windows and Linux (PR-1349)
- Optimized the archive file detection (PR-1422)

Gradle

- The Gradle features can now read Java compiler arguments, enabling NetBeans support for Java preview features in Gradle projects. (PR-1494)
- Gradle now can accept user input from its Output tab. (PR-1461)
- NetBeans honors the project's org.gradle.jvmargs property when launching Gradle Daemon (PR-1501)

Other

- JavaScript parser is now correctly licensed and no longer needs to be installed separately (PR-1407)
- Enhancement to the installer enables subsets of Apache NetBeans to be installed (PR-1505)
- Upgraded Payara support to Payara Platform 5.193 (PR-1470)
- Amazon Beanstalk support updates (PR-1312)
- HTML5 attribute syntax support (PR-1380)
- Cleaned up Welcome Screen no longer refers to Oracle backends (PR-1457)

Fixes

- Maven-based NetBeans modules can now be created again (commit 9e32a85)
- 'Copy Dependent Libraries' in Ant-based projects works again (PR-1469)
- OpenJFX Gluon samples are now correctly registered (PR-1503)

Notes:

Netbeans 8.1 Mac Download

- The donation of the NetBeans C and C++ features from Oracle to Apache was not complete at the time of the 11.2 release, though it is not far off, and the 11.3 release (January 2020) is scheduled to focus primarily on the integration of the C and C++ features, once they land in the Apache NetBeans GitHub. Until then, go to the Plugin Manager, enable the NetBeans IDE 8.2 Update Center, which lets you install the NetBeans IDE 8.2 modules providing C and C++ features.
- WildFly integration is supported by means of the WildFly Application Server plugin located in the Plugin Portal.
- Support for JSF 2.3 is available as a pull request, too late for inclusion in 11.2, scheduled for 11.3: PR-1576
