## Now Let's Make a Kaleidoscope Block!

1. Make 4 corner units. Press toward the corner triangle.
2. Make 4 matching quarters for each block by adding a second Kaleido-Angle to each corner unit. Sew top-tobottom, with the second Kaleido-Angle on top.
3. Join 2 quarters, sewing from the outer edge to the center, to make half-blocks. Stop sewing $1 / 4^{\prime \prime}$ from the center.
4. Sew the halves together. Gently remove stitches in seam allowance at center and press in a swirl to reduce bulk.

## 4. Cutting the Corner Triangles

Look at the $45^{\circ}$ corner of the tool, and find the line with the finished size of the block; in this case, $12^{\prime \prime}$. Align this mark with the lower edge of the strip so the point touches the top edge of the strip. Cut the triangles as shown, changing hands as necessary. Rotate the ruler to continue cutting triangles.

Or, using the same guideline as for cutting strips, now cut squares. Turn the ruler and cut the squares

## What is a Kaleidoscope Block?

A traditional Kaleidoscope block is made of 8 acute isosceles triangles that meet in the center of the block (we call them Kaleido-Angles). A right triangle in each corner completes the design.

Use the Kaleido-Ruler and these instructions to cut both triangles with the correct grainline orientation.

## Cutting a Perfect Kaleidoscope Block

 is as Easy as 1-2-3-4!All you need to know is your desired block size. Our illustrations depict cutting a $12^{\prime \prime}$ block. Look at the $45^{\circ}$ blunt end of the Kaleido-Ruler. Following down the left side of the ruler, find the appropriate cutting line for your desired block size. Follow across the line and read the strip width at the right side of the ruler, or measure strips with the Kaleido-Ruler, as shown.

the Kaleido-Ruler and rotary cut against the large ruler.

## 2. Cutting the Kaleido-Angles

 Align the appropriate cutting line on the Kaleido-Ruler with one cut edge of the strip. If you are right handed, start at the leftend of the strip. If you are left handed, start at the right end. The first cut will be awkward, but subsequent cuts will be natural.

One cut edge of the strip
 now becomes the baseline or bottom edge of the
Kaleido-Angles. The blunt tip of the Kaleido-Ruler should be perfectly aligned with the opposite cut edge of the strip. The cut edges of the strips become the top and bottom edges of the KaleidoAngles. Cut the sides of the first triangle.
Rotate the Kaleido-Ruler $180^{\circ}$, realign and cut next the next piece. Continue rotating the ruler to cut additional triangles.

## 1. Measure Strip Width for Kaleido-Angles <br> Right-handed: Measuring from the right side means you don't have to go around the table or lift or turn fabric. Left-handed:

Turn the diagram upside down and measure as shown.

Position the
Kaleido-Ruler so the line for the desired block size is on the trued-up edge of the fabric. Place a large ruler against the blunt tip, aligning a horizontal line with the fold. Carefully slide the Kaleido-Ruler along the cut edge to confirm that the edge of the large ruler is the correct distance from the edge of the fabric. Remove

a. Align the guideline for your desired block size (ours is $12^{\prime \prime}$ ) with the trued-up edge of fabric. The ruler will be on the right edge of the fabric if you are right handed and the left if you are left handed.
b. Position another ruler against the long edge of the Kaleido-Ruler.
c. Remove the Kaleido-Ruler and cut against the large ruler to get the corner triangle strips.
