

Best Free Stock Analysis Software For Mac

A stock charting software helps in carrying out the process of technical analysis for the investors along with considering the cleanliness, professional scalability and the easy to use characteristics. Here is a list of some of the best stock charting software available for use. These software are extremely efficient and effective to do the. Analyze a Stock in 60 Minutes (Free Stock Analysis Excel Version 2.0) March 14, 2017 5 Comments A few readers have accused me in the past of being a sadist who wants them to do the dirty work of analyzing companies on their own, instead of simply recommending stocks like so many other blogs do. TV channels put a lot of their content online for free, but you usually have to go to.

Scanning for new stock trades does not have to be a time consuming activity if you know the right websites to go to. The **best free stock screeners** offer investors the data and usability they need to efficiently screen for stock picks.

Like my list of the best free stock chart websites, this list focuses in on the best stock screeners and scanners available to stock traders and casual investors. The criteria used in this ranking includes depth of filter criteria, selection of both fundamental and technical filters, ease of use, and extra functionality.

I spend hundreds of hours testing financial products and services each year. My reviews are honest and unbiased. If you use the links on this page to open an account, I may be compensated. Thank you for your support. Read more.

Best Free Stock and ETF Screeners

- **TradingView** – Best Overall
- **FINVIZ** – Best Fundamental Screening
- **TD Ameritrade** – Best Real-time Stock Scanner
- **Yahoo Finance** – Basic and Simple
- **MarketSmith** – Best for CANSLIM investors

1. TradingView

TradingView (if first link doesn't take you direct, try this one) is my favorite site for stock and ETF screening because the site offers the best overall combination of quality data and ease of use. The screener uses a modern HTML5 design, which makes it extremely user-friendly. The selection of fundamental and technical data available to screen is also vast, and customizing data ranges is a breeze. I love the fact that I can easily swap between ETFs only or stocks only. I also appreciate being able to screen by a large selection of market indices. Hands down, TradingView is my go-to site for free stock charts and free stock screening in 2020.

Pros: Fully featured stock and ETF screener with an excellent selection of fundamental and technical data. List alerts and advanced filter customization are all included for free.

Cons: Data exports and streaming real-time quotes requires paid subscription to TradingView Pro.

2. FINVIZ

The **FINVIZ.com stock screener** ranks second on my list of top screeners because of its large selection of criteria, user-friendly interface, and overall functionality. FINVIZ offers a thorough selection of both fundamental and technical data, and all results are cleanly shown. Perhaps my favorite feature is the ability to be able to hover over any stock ticker to see a chart pop up instantly. On the downside, there is no filter option to view only ETF or stock results.

Pros: Large selection of fundamental and technical criteria, easy to use, quick hover stock charts.

Cons: No way to filter only ETFs or only stocks and tool is not very mobile-friendly. Advanced features like data exporting, customized filters, and backtesting locked behind FINVIZ ELITE paywall.

3. TD Ameritrade

TD Ameritrade is a \$0 online broker best known for its thinkorswim trading platform, which comes loaded with trading tools. For screening and scanning, I use the Stock Hacker tool. Like most other screeners, Stock Hacker is loaded with filter options. That said, Stock Hacker is best used as a real-time scanner, since the trading platform includes free real-time streaming stock quotes. For example, you can scan real-time for stocks with specific technical patterns like flags, channels, and wedges. As one can surmise, TD Ameritrade's goal is to get you hooked on the trading platform so you fund your account and switch to the broker for everyday trading. TD Ameritrade was ranked first overall by StockBrokers.com in their 2020 Online Broker Review.

Pros: Includes streaming real-time data, easy to use, full feature set, and is built right into thinkorswim which means quick access to dozens of other trading tools.

Cons: To download and use thinkorswim, you at least have to open an account (no minimum deposit).

4. Yahoo Finance

The **Yahoo Finance** stock screener is very basic, but what it lacks in its depth of technical and fundamental criteria to be filtered, it gains with simplicity. Alongside ease of use, the free stock screener includes free streaming quotes, ESG data filters, and results include columns of popular Yahoo Finance fundamental data. Also, in addition to a traditional results list, results can be viewed as a heatmap.

Pros: Simple, easy to use, includes streaming quotes and ESG filters, heatmap view.

Cons: Notably small list of criteria available for screening, "Rate of Return" and "Valuation" locked behind paywall, no data exporting supported.

5. MarketSmith

Rounding out my 2020 list of top stock screeners is **MarketSmith**. MarketSmith is the charting package from investors.com (Investors Business Daily). First, it is important to note that MarketSmith is not free, nor is it cheap. To gain access to the screener, which includes all the William O'Neil metrics and ratings, you have to subscribe. That said, the charting platform is terrific. All in all, for investors who are seeking access to proprietary fundamental ratings to help them identify and surface viable stock picks, then MarketSmith is worth a look.

Pros: Excellent charting package includes access to the screener alongside IBD's entire list of proprietary ratings.

Cons: To gain access to the stock screener, you have to sign up for MarketSmith, which costs \$149.95/month.

Performing technical analysis is much easier when you use a great stock chart website. Whether you are a seasoned stock trader, casually invest, or are just learning how to read a stock chart, here are six great sites for free stock charts.

I spend hundreds of hours testing financial products and services each year. My reviews are honest and unbiased. If you use the links on this page to open an account, I may be compensated. Thank you for your support. Read more.

To find the best free stock charts, I focused on the following characteristics: professional scalability (web technology used to make the charts), total features (include total trading tools and technical indicators), design (the cleaner the better), and ease of use (HTML5 charts and clean option menus are a nice bonus).

It is important to note that nearly every stock charting service, no matter which one you use, offers a free tier and a paid premium tier. None of these sites, less Google, is supported by ads alone. By paying to upgrade, you will, in most cases, receive streaming real-time quotes alongside additional technical indicators or other advanced charting features.

Best Free Stock Charts Websites

- **TradingView** – Best charting technology and community
- **TD Ameritrade** – Most customization options
- **StockCharts.com** – Simple design
- **Yahoo Finance** – Simple design
- **Google Finance** – Quick and easy charts
- **FINVIZ** – Automated technical analysis

1. TradingView

TradingView offers the ultimate clean and flexible experience for looking at stock charts. TradingView stocks charts are community driven to provide technical analysis in the form of optional annotations on each chart. Community aside, TradingView also supports extensively detailed charts, not too mention better valued pricing than StockCharts.com for those who want access to advanced features and/or real-time data. Overall, TradingView is my favorite website for free stock charts.

Pros: Most flexible stock charts, excellent community features including chat rooms, easy sharing, and over 100 charting tools and indicators included.

Cons: Community features take time to learn.

2. TD Ameritrade

TD Ameritrade is a full-service online broker that is best known for its trader technology. I've had an account for well over a decade and love their charting package included with the thinkorswim desktop platform, which was ranked first overall by StockBrokers.com in their 2020 Broker Review. There is no minimum deposit to open an account and download the trading platform. Whenever you are ready to trade, just fund your account. TD Ameritrade charges \$0 for everyday stock and ETF trades.

Pros: Excellent charts with over 300 optional technical indicators. Real-time streaming data included.

Cons: Even though no minimum deposit is required, you still need to open an account first to download the trading platform.

3. StockCharts.com

Stockcharts.com offers casual traders simplicity, cleanliness, and overall scalability. Behind TradingView, it is the most widely utilized free stock charting site for financial bloggers. StockCharts.com offers a wide variety of different free tools and ways to analyze any stock chart. For investors who want historical charting and further analysis, they can upgrade to a paid subscription.

Pros: One of the original free stock chart websites. Charts are easy to read, customize, and share.

Cons: No HTML 5 charting or free streaming real-time data.

4. Yahoo Finance

Best Free Stock Analysis Software For Mac Pro

Yahoo Finance upgraded its entire charting experience in the Spring of 2019. Today, Yahoo Finance offers clean HTML 5 charts that are clear, easy to use, and ideal for everyday investors. Yahoo Finance is also an excellent website for stock quotes, research, and news (less the annoying ads). Unfortunately, the new charts restrict advanced features like key event overlays, requiring a subscription to Yahoo Finance Premium for \$34.99/mo.

Pros: Clean, full screen stock charts are easy to read and customize.

Cons: The best features are locked away behind a paywall.

5. Google Finance

Google Finance provides a very simple charting solution for investors. What makes Google's charts so nice is the ability to just Google search for the ticker and instantly have a simple chart pull up. For example, try Googling, "Apple stock chart".

Best Free Stock Analysis Software For Mac Os

Pros: It's quick and easy, just Google search!

Cons: Very basic charts with no indicators or any customization options what-so-ever beyond toggling the date range.

6. FINVIZ

Free Stock Analysis Software Download

FINVIZ.com just missed my top five stock chart websites list for 2020, but the site is one of favorites for stock screening. FINVIZ charts are very simple, which is also the downside, but include technical analysis overlays on them by default. Unique feature aside, unfortunately, even basic customization requires upgrading to FINVIZ Elite for \$24.96/mo.

Pros: Simple stock charts come with automated technical analysis. Additional fundamental data is also displayed right below each chart and includes analyst ratings.

Cons: Very basic stock charts offer no way to even set a time range without upgrading to a paid subscription.

Best Free Stock Charts: Features Comparison

Website	Base Cost	Premium Version	Best Feature	Rating
TradingView.com	Free	\$14.95/mo+	HTML5 charting	5 Stars
TD Ameritrade	\$0 min dep	\$6.95 per trade	300+ indicators	4.5 Stars
StockCharts.com	Free	\$14.95/mo+	Classic design	4.5 Stars
Yahoo Finance	Free	\$34.99/mo	Simple design	4 Stars
Google Finance	Free	N/A	Quick and easy	3.5 Stars
FINVIZ.com	Free	\$24.96/mo	Automated analysis	3 Stars
