### How Does It Work?

P2P camera is an abbreviation for the peer-to-peer camera. These cameras all have a unique ID that allows users to link the camera to smartphone easily.

Though you need an application that can get pinged from this camera, it would rather than just the default smartphone.

Once a connection has been established between the P2P camera and ismartviewpro, you will then be able to access the video footage recorded by the camera via your smartphone.

There are two ways to establish a connection. The first method is to scan the QR code with the application. The code is usually located on the box of the camera or at the bottom of the camera.

The second way to establish the connection is to do a LAN search. Any devices that are connected to the same network will be able to establish the connection even though scanning QR code is more common and convenient.

## **How to Download ismartviewpro for PC**

### **Mac Download Game**

Currently, there is no desktop version for ismartviewpro on PC yet. However, we can still download the app on a PC by using a smartphone emulator. If you are more familiar with Android, you can go for Bluestacks 4 or Nox. These are both Android emulators that I know.

Otherwise, if you are more fond of Apple IOS, go for Ipadian. There are many more emulators out there on the market, but these are the best ones I know for both Android and IOS.
