## SECTION 3: Composition/information on ingredients

### 3.2. Mixtures

<b>Description</b>	Graphene film on SiO <sub>2</sub> /Si substrate. Graphene (CAS 1034343-98-0) is a thin layer of pure carbon; it is a single, tightly packed layer of carbon atoms that are bonded together in a hexagonal honeycomb lattice. It is an allotrope of carbon in the structure of a plane of sp <sup>2</sup> bonded atoms with a molecule bond length of 0.142 nanometres. Layers of graphene stacked on top of each other form graphite, with an interplanar spacing of 0.335 nanometres.

\* Annual tonnage does not require registration or the registration is envisaged for a later registration deadline.

\*\* Please notice that substance properties used for the hazard assessment of the mixture come from graphite (bulk substance, CAS 7782-42-5). The properties of the nanoform are under evaluation and to some extent not known.

## SECTION 4: First aid measures

### 4.1. Description of first aid measures

<b>Inhalation</b>	In case of discomfort provide fresh air, warmth and rest, preferably in a comfortable upright sitting position. Rinse nose and mouth with water. Get medical attention if any discomfort continues. If breathing stops, provide artificial respiration.
