

When your response team needs more than an AED, it's time to consider the R Series

The ZOLL® R Series® monitor/defibrillator provides clinicians with comprehensive support for resuscitation. This includes cutting-edge technology to help you meet current guidelines for achieving high-quality CPR, as well as OneStep™ electrodes that simplify and speed therapy. And because the R Series conducts a comprehensive self-test daily, you can be assured that it will always be Code-Ready®.

CPR Feedback—The New Standard

Every victim of cardiac arrest requires CPR—high-quality CPR. The R Series has Real CPR Help® technology to provide coaching on CPR depth and rate, so you know you're meeting the 2015 American Heart Association (AHA) Guidelines. With CPR Dashboard™, detailed visual feedback, including the depth and rate of each compression, is displayed on the R Series screen.

One-Step Electrodes—Simple and Comprehensive

Monitor, pace, defibrillate, and get Real CPR Help using only one type of electrode. Electrodes are preconnected and are automatically tested for an expiration date.

Comprehensive Readiness Checks

Problems during a code are often related to compromised supplies and batteries. The R Series extends testing far beyond a basic test shock to check more than 110 individual indicators of readiness, including batteries, cables, and electrodes.

ZOLL®

R Series ALS Package

Basic Defibrillation with OneStep Pacing
 ZOLL Part Number – 3502000001130012

The R Series ALS is a versatile manual/advisory defibrillator. When set to the manual configuration, the device operates as a conventional defibrillator in which charging and discharging are fully controlled by the operator. The unit may be configured to automatically analyze the ECG, charge the defibrillator, and prompt the operator to “press shock” between periods of CPR.

R Series Plus Package – For BLS Users

Basic Defibrillation with OneStep Pacing
 ZOLL Part Number – 3502000001110012

When the R Series BLS powers on, it shows first responders a simple, one-button AED interface. If an ALS-trained rescuer arrives, with the press of a button, the BLS unit turns into a full-function manual defibrillator. All user-chosen advanced monitoring options are functional and, if installed, the pacing controls are revealed. This entry-level model allows medical facilities to deploy R Series technology.

The R Series ALS and R Series BLS includes:

- 1 SurePower™ rechargeable Li-ion battery pack
- 2 sets of OneStep Complete electrodes
- Real CPR Help
- Code readiness testing system
- ZOLL Rectilinear Biphasic™ waveform technology
- Compact flash card slot
- Integrated AC power (120 VAC/60 HZ)
- 5-year warranty
- On-site in-service

Additional parameters available:

- Pulse oximetry (SpO₂)
- Non-invasive blood pressure (NIBP)
- Capnography (EtCO₂)
- Expansion pack (See-Thru CPR, CPR Dashboard, Wi-Fi capability)

To find out more about how ZOLL can help, contact your ZOLL representative. If you aren't sure who that is, call **888-851-8584** or email distributorsupport@zoll.com to find out.
