## Accessories and Training Products

ZOLL is committed to making sure you're well prepared to treat someone in sudden cardiac arrest. From our OneStep™ family of electrodes to our training kit and other training products for the R Series®, we want to make sure you have the resources and skills needed to respond as effectively as possible.

When training staff, clinical educators can choose to use either OneStep training electrodes or a complete training kit, which includes a manikin and See-Thru CPR® simulator, as well as the electrodes. See-Thru CPR is ZOLL's proprietary technology that is used to filter out compression artifact on the ECG monitor. This allows rescuers to see the underlying heart rhythm during CPR, which reduces the duration of pauses in compressions. The See-Thru CPR simulator enables staff to become familiar with this unique technology before they need to use it with a patient during a resuscitation event.

OneStep Complete Electrode

The R Series has unmatched pediatric capabilities. When used with OneStep Pediatric CPR electrodes, the R Series automatically reduces the shock energy to a lower protocol, starting at 50 joules rather than 120. When OneStep Pediatric CPR electrodes are used, the depth and rate of every compression is displayed on the R Series' CPR Dashboard.™

SurePower™ Battery System

Whether you require paddles, a new battery, or a Train-the-Trainer manual, we have the accessories and training products to meet your needs.
