

# Assembly and Fitting

## Instructions for:

# Stillframe<sup>®</sup>

# Single

You've found your way into the box, congrats and thank you for your purchase. The Stillframe is packed to show you the smallest size you can make it. It can fit in carry-ons and backpacks for the shooter on the go or stay safely tucked away in the camera truck without taking too much room. Here's a guide to putting it all together.

**1. Carefully remove the stillframe, shoulder pad, elbow support and tote bag from its packaging and give yourself a little room for setup.**

**2. Unfurle the Stillframe vest and lay out with the big Rigpacks logo facing you.**

**3. Undo the side release clasp closest to the side of the belt that's adjustable, the prong side of the buckle.**

**4. Pull the belt to fully release the prong side of the buckle, remove from belt and set aside for now.**
