

Upgrading to a New Version of QRlogix Software

*Applies to PrintLab, Espo LMS, and QRlogix Software

1. Export any current templates to the Templates folder or another safe location.
 - a. C:\Users\Public\Documents\QRlogix\Templates
2. Take screenshots of your template forms in case they need to be rebuilt.

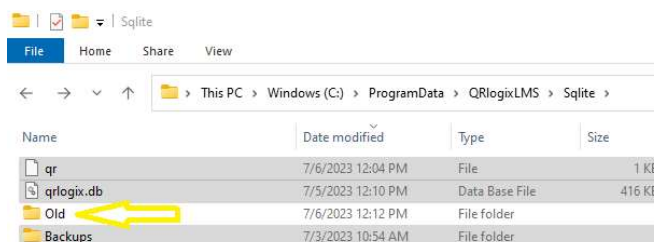

3. Copy/save the label designer code from any active templates in case they need to be rebuilt.

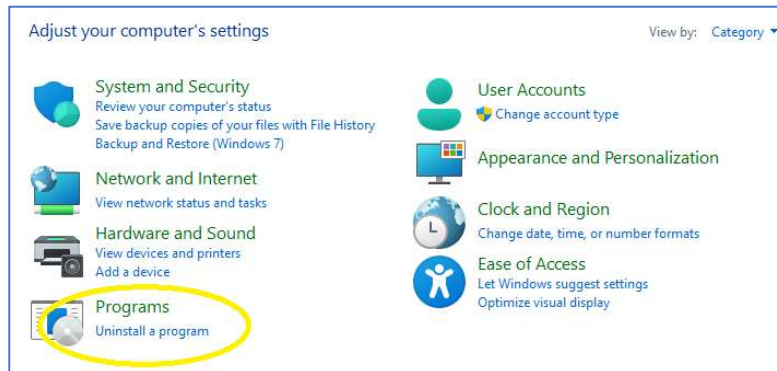

```

^XA
^CIO
^FTS,50
^A0N,33,31^FD@prefix@-@case@-@sample@@@block@-@slide2@^FS
^FTS,90
^A0N,33,31^FD@name@^FS
^FTS,130
^A0N,33,31^FD@panelname@^FS
^FTS,170
^A0N,33,31^FD@panelstain@^FS
^FTS,210
^A0N,33,31^FD@pathologist@^FS
^PQ1,1,1,Y
^XZ
  
```

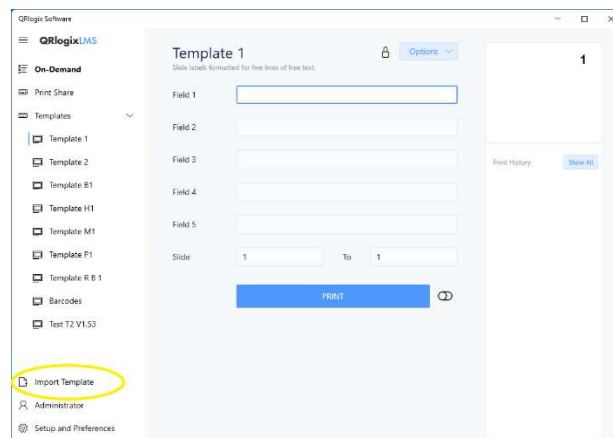

4. Backup contents of your Sqlite folder located at: C:\ProgramData\QRlogixLMS\Sqlite
 - a. Create new folder = Old
 - b. Place all contents of Sqlite folder into "Old" folder

5. Uninstall software in Control Panel

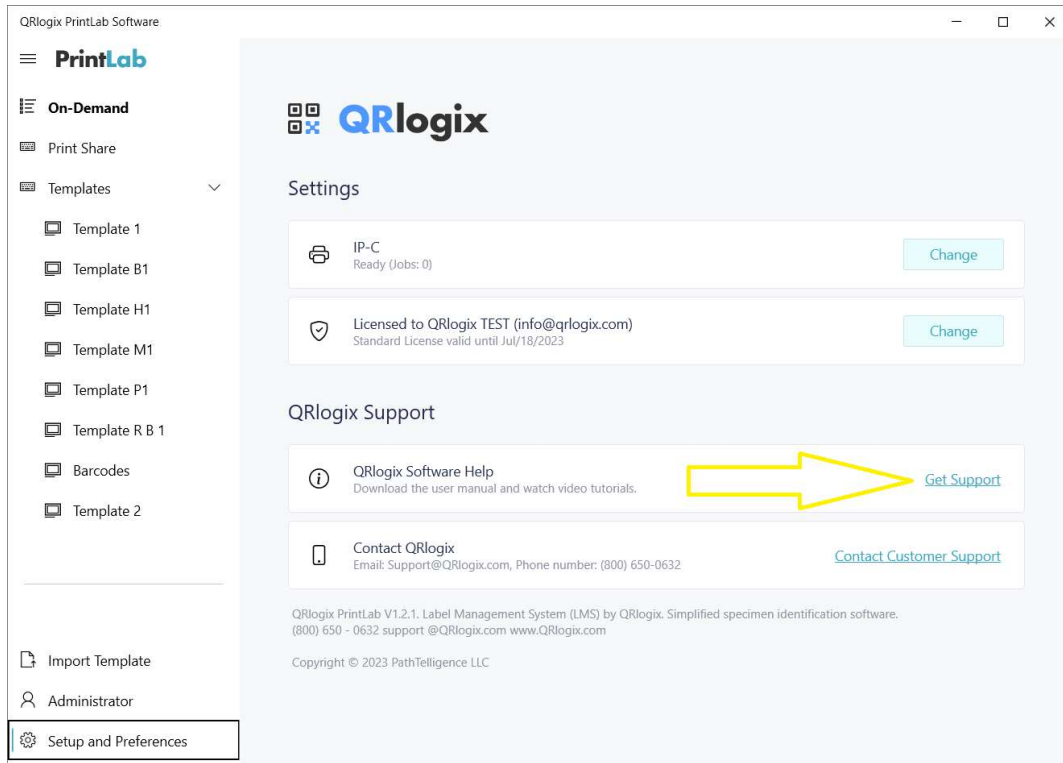

6. If PrintShare is installed, delete the AutomationService folder located at C:\AutomationService
7. Download the new version of the software from the link provided.
8. Download the new version of PrintShare if you are using automation.
9. Follow the software installation instructions found in the User Manual.
10. If connecting to PrintShare, follow the installation instructions found in the User Manual.
11. Use the Import Template button to load previous templates.

12. If you have any problems loading old templates, email the exported template files, along with the form screenshot and label designer code to support@QRlogix.com and we'll rebuild the templates in the current version and send you the files.
13. Test your templates. Contact QRlogix if you have any problems.
