

What makes Eberbach Reciprocal Shakers with Rocker Arms unique?

Eberbach reciprocating shakers with rocker arms can produce a more aggressive mixing action due to our rocker arm design. Below is a diagram showing our rocker arm design, the rocker arms actually create two axis of motion, a vertical component of motion along with the horizontal axis of motion which produces an arc motion generating a more aggressive agitation than a standard reciprocal shaker. This applies to all E5900, E6000, E6010, E6100 and E6200 series shakers.
