

## How to measure your ring diameter

**1.** If you have a ring that fits just right, you can measure the diameter of the inside the ring.

**2.** Place the ring on top of the ruler and measure the widest part of the ring from inner edge to inner edge. When measuring, round to the nearest whole millimeter. Compare the obtained number with our size chart to find out your ring size.

**Tip:** If your ring is not circular, measure the shortest distance across.

# How to measure your ring circumference

## Step 1:

Cut a piece for a paper long enough to wrap around your finger

## Step 2:

Wrap the paper around your knuckle, which is the thickest area of your finger, being careful not to wrap it too tightly or too loosely, as this may impact the ring size. Make sure you can slip the piece of paper snugly past your knuckle.

## Step 3:

Once you're happy with the size, mark the intersection of the paper with a pen and measure it in millimetres using the metric ruler. When measuring, round to the nearest whole millimetre.

**Tip:** There are a few factors to keep in mind before measuring your finger:

- Because our fingers change sizes throughout the day, measure your finger at the end of the day when it is the largest.
- Measure your finger three to four times since its size changes with temperature. When hot or cold, your finger can shrink or expand.
- Make sure you leave enough space to accommodate your knuckle.

Use the chart to see which ring size corresponds with your measurement and find your perfect size.
