Outer container

Grid Steel, galvanized Bottom plate Steel, galvanized

Label plate large - 6 field, with Schütz-Ticket

Inner container

Rectangular blow molded tank of high density polyethylene

Container PE-HD, natural

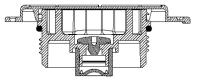

Filling opening

Screw cap DN150 / 6", PE-HD, black

O-ring gasket TPE Sealing-cap red

Plug G2"plug w/vent (Silicone)

Discharge opening

Outlet valve integr.butterfly-valve DN50/2"

Case PE-HD
Connection thread metric
Flap gasket / Ball gasket PP

Handle color blue, Handle protection

Screw cap PE-HD
Screw cap gasket PE, foamed
Screw cap color black

Features

Reko specialty

All parts which come into contact with the filling product are replaced by new original SCHÜTZ parts: Inner tank, screw cap, valve and label plate (for SCHÜTZ-Reko). The outer case (grid, bottom group and pallet) may show signs from the prior use!

Heavy metals

Concentration level of heavy metals (Pb, Cd, Cr VI and Hg) in packaging does not exceed 100 ppm

Delivery

Ready for filling. The customer or filler is responsible for testing the material compability of the filling material with the packaging

User information:

By implementing and continually improving extensive preventive programmes, SCHÜTZ strives towards minimising the potential contamination risk for filling material in line with the current state of the art and in accordance with recognised und applicable quality and system standards. In industrial manufacturing, however, the possibility of particles arising cannot be fundamentally and entirely eliminated. Specifically for plastic and steel packaging, unavoidable friction during opening and closing as well as static charging of the packaging contribute to the development of particles and/or the possibility of particles being attracted. Such particles can then also invariably penetrate the packaging interior. With the goal of minimising the risk of particle formation and transmission into packaging, users are recommended – particularly during further processing – to keep packaging closed wherever possible and to keep the number of opening and closing procedures as low as possible. In the case of sensitive filling materials or filling material applications (e.g. for food/pharmaceutical products, paint or electro-chemicals), it is also recommended that the filling material is filtered on removal or prior to further processing.

SCHÜTZ reserves the right to change the construction, technology, design and material of the product or individual components without notice. The dimensions and weights given here are approximate and can vary according to the configuration of the individual components. For other product details and operating information concerning the correct handling of our packaging, please consult our Handling Guide.
