Delivery

Ready for filling. The customer or filler is responsible for testing the material compatibility of the filling material with the packaging

This specification is written and provided in accordance with the current version of the SCHÜTZ "Quality Management Standard for Supplies of Packaging Materials" which you can read by following this link: www.schuetz.net/qmstandard

PE drums are designed and constructed for the transport, storage and handling of filling goods within a single cycle. After initial opening, the containers must be emptied as quickly and with as few intervals as possible. In drums that are reused multiple times, the lids, bungs* and seals can wear out depending on the product, type of application and duration of use. SCHÜTZ Technical Customer Service will be happy to assist you in selecting a suitable packaging system.

General information about product descriptions, filling processes, storage and transport, resistance, type tests and
