FOR A BETTER WORLD

# ENVIROCLEAR

## CLEANS EFFLUENT SYSTEMS - DESTROYS ODOURS

**Triple7 EnviroClear** is an effective, quick-acting, bio-based product that cleans while destroying odours.

The product improves effluent and septic system drainage, enhances water flow, restores efficiency, eliminates odours, assists with solids breakdown and saves on expensive pump-outs.

### Septic Systems and Aerated Waste Treatment Systems

Septic problems generally arise because of an imbalance between the natural bacteria that digest waste and the amount and type of waste they consume.

Inefficient septic / waste systems can be expensive to rectify and also cause many health issues.

### Benefits

- Improves drainage and clogging problems in leach drains & soak wells
- Clears blocked pipes
- Destroys odours
- Stimulates septic tank function
- Reduces plumbing costs
- Improves water flow
- Lowers health risks
- Saves money
- Protects waterways & ecosystems

### Causes of Problems

**Septic overload** - High use of facilities e.g. public toilets, mine sites and factories.

**Grease deposits** - Restaurants, food processing and canteens.

### Solving the Problems

**Triple7 EnviroClear** is a unique surfactant formulation that destroys odours and breaks down built-up grease and fat deposits, allowing them to be released from the system. The product cleans and deodorises drains before they enter the septic system, and improves drainage in leach drains and soak wells. When **Triple7 EnviroClear** is used instead of harmful chemical products, it restores maximum efficiency and maintains aerated waste treatment and septic systems in optimum working condition.

### Product Contents

**Triple7 EnviroClear** does not contain toxic additives such as caustics, phosphates, strong acids, petroleum products, terpenes, glycol ethers, lauryl sulphate, oxalic acid & ammonium compounds.

Contents: Non-ionic surfactants, fatty acids, linear alcohols and botanical buffering agents.

## Applications

---

### Septic Systems & AWTs (Aerated Waste Treatment System)

Dose initially with 250ml (1 cup) per day of concentrated product into toilets, sinks or drains for the first four days. Add 1 cup (250ml) of **Triple7 EnviroClear** weekly to maintain treatment and system efficiency.

### Portable, Camping and Caravan Toilets

Add 70ml per litre to holding tank. Then add 35ml per day. If odour increases, add more product as required.

### Odour Control in Drains, Grease Traps & Septic Tanks

Add 250ml per day to plumbing system until odour-free. Then add 250ml weekly for system maintenance.

### Composting, Disposal Bins & Garbage Compactors

Apply by spraying or misting, or alternatively, pouring 250ml onto surface.

### Hard Surface Cleaning

Wash with diluted product eg: walls, floors, benches and ablution blocks.

### Dilution Rates

**Triple7 EnviroClear** dilution rates range between 1:20 parts for washdown to 1:100,000 parts for an in-line injection system. Consult the Manufacturer for specific application advice.

## Frequently Asked Questions

---

### What is Triple7 EnviroClear?

**Triple7 EnviroClear** is an organic septic and odour treatment.

### How does it work?

It works by assisting the breakdown of solids in septic tanks to save on pump outs and helps system performance.

### How long will a bottle last?

20 litres will last up to 20 months (250ml per week) in normal use conditions.

### Will it help remove the smell?

The product will eliminate odours in wastewater tanks e.g., grey water, septic tanks and caravans.

### Will it clear blocked pipes?

Yes, it will clear blocked pipes and improve drainage and clogging problems in drains & soak wells.

### Will it remove fats and greases?

Yes, it clears pipes of organic deposits and assists grease trap function and odours.

### Is it safe to use?

Yes, it is environmentally responsible, non-toxic, non-corrosive, non-hazardous and totally organic.

### Is it easy to use?

The liquid requires no mixing.

### Is it guaranteed?

Yes, it has a money-back performance guarantee.

### Where is it made?

**Triple7 EnviroClear** is made in Australia.

## Testimonials

---

“At our current house, we have a septic tank system which functions well as far as we can tell except for sewer smells during heavy loadings. We use one cup of **Triple7 EnviroClear** each time this occurs for immediate odour removal.”

### ***Householder with new septic tank***

“Our hotel business experienced high effluent loadings. **Triple7 EnviroClear** was then added to the grease traps and the past, persistent on-going odour issues with a neighbouring hospital were consequentially resolved within 2 - 3 days.”

### ***Hotel Resort Owner***

“We have been using **Triple7 EnviroClear** to assist in the breakdown of wet well toilet systems and for odour control. We have found the product to be very efficient – only requiring one cup per week. We recently had the system pumped out and there was a noticeable increase in the breakdown of solids.”

### ***Tank Cleaning Contractor***

“I run a Waste Water Maintenance and Repair Business and have also been a Water / Waste Plant Operator for Local Government. Recently our team has encountered several cases of misuse of household waste systems. The plants have been damaged by excessive use of harmful chemicals. The problems which have occurred have caused bacteria kill of resulting in odour and poor quality effluent issues. In researching products to combat these issues, we came across the **Triple7 EnviroClear** product. After testing this product for six months, I can say it has improved almost every system it has been used in (aerated waste systems and activated sludge systems). Odour issues are gone and effluent quality is on the rise. I think by using this product, you will find that the whole system becomes cleaner and easier to work on, resulting in less overall cost to the householder.”

### ***Waste Water Maintenance & Repair Service***

“My septic tank was close to full (3”) from the top. The overflow pipe to the trench was covered by some 18 inches, the bacteria action was not working properly. On 25.11.08, I started using **Triple7 EnviroClear**. By the end of the third week a fermentation process began, solids were breaking down now three months later the contents are back down to the overflow pipe, bad odours are gone, problem solved, no pump-out needed.”

### ***Mundubbera QLD***

“Our company hires out porta-loos for high profile functions. Recently we trialed traditional chemicals in one group and **Triple7 EnviroClear** in the other group. The product reduced odours better than the best traditional chemicals, even when the units were moved from one site to another.”

### ***Hire Company***

“We operate a Septic Tank/Grease Trap cleaning company. We previously had a problem with odours coming from our suction hoses. Traditional products that we used in the past were either hazardous and not eco-friendly or simply masked the problem with strong fragrances. Recently we trialed **Triple7 EnviroClear** at 5% dilution, applied using a simple trigger spray bottle. Very quickly the odours disappeared, except for those coming from inside the hoses. We then sprayed in each opening of the hoses and the odours became virtually undetectable. Now when we arrive at the next job, customers do not detect odours coming from our truck ... a big plus for our business!”

### ***Liquid Waste Transporter***

“We have completely washed out the toilet block at one of our busiest railway stations with **Triple7 EnviroClear** and there is no odour what-so-ever. We have never had the odour removed before and the toilet look so clean in such a simple manner. The old concrete tends to hold odours and grime, but the product has done an excellent job. We now use it for everyday cleaning.”

### ***State Rail Authority***
