Step by step cleaning of Bamboo Straws

1. Hold the straw under the tap for a few seconds.

2. Insert the cleaning brush in the straw and rotate. Rinse again under the tap.

3. Put straws out to dry fully.

Once in a way

If you feel the straw needs a more thorough cleaning - Boil a mixture of vinegar and water, soak the straws for a few minutes and then rinse out with plain water. Dry well and they are good as new.

Store in well ventilated places and not in airtight containers!
