

## Are you adding Remix Powder Daily?

Do not forget to add this daily.

### 1 Bad Smell

Bad smell indicates your pile is soggy and **needs more Remix Powder**. Mix in well.

Optimum composting does not smell bad. You need to add proper qty of **Remix Powder DAILY**

### 2 Leachate

If too much liquid builds up in your composter, it means you have put less Remix Powder. **Add lots more Remix and mix in well, till all units have no excess liquid.**

Too much leachate

**Get on a video call** for help to fix Bad smell, Leachate, worms. Mon - Sat - 10 am - 5 pm **9916426661**

### 3 Worms, Bugs

Usually in a week you will begin to see small white worms. These are the larvae of the black soldier fly. There will be other bugs too.

These are good for composting and are harmless.

**Control their population** by adding 1 table spoon of **Neem powder** and mixing in well once a week. Increase the heat of the pile by adding 1 teaspoon of **microbes daily**. This will reduce the bugs.

Also keep aeration clear - **unclog the holes** in the breather caps. This will also control bugs. **Use a pin.**

Unclog holes

**If worms come out** of the composter, sweep them into a dust pan and put back in your composter or under a tree. Birds love them.

Mature maggots become **black**. **Soldier flies** that emerge are **harmless**.

### 4 Moisture

Composting naturally creates heat so water condenses inside the plastic units.

**Wipe this excess moisture** from under the lid daily.

### 5 Stir

**Stir top unit 3 times a week** very well.

No need to stir bottom units once kept aside.

### 6 Keep fruit flies away

Don't forget to **cover your compost pile** with paper which helps control fruit flies. This will get wet and soggy. Tear and mix in with the pile. Use a fresh sheet.

You can also cover **with a thin muslin cloth** and reuse that, in place of newspaper.

### 7 Harvested compost

Add more Remix in and store - sieve a month later

Ready to sieve and store for maturation

Add moisture, mix and store for month before sieving

### 8 It's full!

If all your Gobble Units **get full** before 40 days, you are **generating more than 1 kg of waste per day**.

You will need to **invest in another composter**. Or try the Chomp as an additional unit.
