# Go Green

## QUALITY & GRADING

We harvest eggs every day and grade them based on their consistency and weight. The candling procedure is used to assess the consistency of the eggs without having to crack the shell. Each egg rotates under a harsh light. The quality of the egg yolk the white and the air space are monitored and eggs that don't conform to requirements are thrown out.

### THE FRESHER THE BETTER

The quality of the egg is determined by the size of the air space. The air room extends as the egg deteriorates.

An egg's freshness can be determined by placing it in a bowl of salt water.

A new egg will lay on its side on the bottom, an egg that is one week old will lie at an angle on the bottom, and eggs that are two or three weeks old will stand upright.

**THE APPEARANCE.** The yolk will form a nice firm dome & egg white will lie stiff around the yolk.

## SOCIAL & ENVIRONMENT

Iyad Alsarayji supports three main goals - environmental health, social and economic equity, and economic profitability.

Iyad Alsarayji always support "**GO GREEN**", to keep green and make our planet green. Go green. Think GREEN.

# MEET THE TEAM
