- Anti - Microbial

Advanced protection for up to 24 hours!

## Hand Sanitiser Gel

### Application Guide

With & Without Aloe Vera

#### Elemental Protection

Data shows that most infections are transferred from person to person by direct contact, either from each other or from cross contamination via objects such as door handles, furniture, hand rails etc.

Regular sanitisers are designed to kill germs upon application but become ineffective against further contamination within seconds. This means you have to keep reapplying, which can cause skin damage, particularly if using alcohol based products.

Unlike other sanitisers, Alogenic Silver Shield kills germs fast and keeps working for up to 24 hrs as long as the nano Silver particles remain intact on the hands. i.e. between washing hands.

Hand Sanitiser Gel with and without Aloe

- Washing is your first defence against germs, wash thoroughly, removing dirt residue and grime from hands first.

- Apply a small amount of gel to one hand, about a ten cent coin size is all that is required. The Silver Shield Gel is designed not to evaporate until you have had time to cover hands completely

Reapply Alogenic Silver Shield after hand washing.

- other activities may require more frequent application i.e. wet kitchen work, constant physical work and manual handling.

## Colloidal Silver Applications

### Elemental Protection

For thousands of years, silver is successfully used to treat countless ailments and diseases including:

#### Wound treatment:

Spray directly onto cuts burns grazes and other skin conditions to accelerate healing and help prevent infections, can even be used on sunburn and insect bites.

Also good for application to wound dressings for added wound protection and to extend the effectiveness of the dressing.

#### Sinus infections:

Help combat sinus infections by spraying directly into nostrils using a nasal spray bottle, or add a few drops of concentrate to a saline nasal wash solution bottle that you can purchase at pharmacies.

#### Fungal problems:

Silver is a powerful anti fungal agent, apply to feet for athletes foot/toenail fungus, or spray lightly onto scalp to treat dandruff which is caused by a specific type of fungus.

#### Eye infections:

Apply a couple of drops to eyes using a dropper (available at pharmacies), great for treating many types of eye infections.

#### Water treatment:

Silver is commonly used for commercial, industrial and domestic water sterilisation purposes. The concentrate is perfect for travellers, just a few sprays into a standard drinking bottle can eliminate water borne pathogens and provide you with safe drinking water. Can also be sprayed onto food.

#### Internal infection & disease:

Silver is taken by many as a treatment for a particular internal medical issue, or as a daily routine to prevent disease and assist the body's

## Surface Sanitiser Spray

### Application Guide

#### Elemental Protection

Data shows that most infections are transferred from person to person by direct contact, either from each other or from cross contamination via objects such as door handles, furniture, hand rails etc.

Regular sanitisers are designed to kill germs upon application but become ineffective against further contamination within seconds, this means you have no protection between applications.

Unlike other sanitisers, the unique Alogenic Silver Shield formula kills germs fast and keeps working as long as the nano Silver particles remain intact on the surfaces, it lasts for up to 24hrs, providing protection between applications

Surface Sanitiser Spray 100ml

- Prepare surfaces to be disinfected by cleaning thoroughly and removing any solids and grime.
- Apply Alogenic Silver Shield surface sanitiser by applying a light mist spray to the target surface, if spraying is not an option, the liquid can be applied with with a cloth. safe for most water safe fabrics and soft surfaces. Leave and allow to dry naturally.

- Leave and allow to dry naturally, the nano silver particles will continue to do their job for up to 24hrs.
- Reapply as required after each wash down, or at more regular intervals for lightly soiled areas i.e. hand rails.

Advanced protection for up to 24 hours!
