

**COMSHEL 35-W** Comshel, 35' height, timber frame base

- Proven protection for communication systems
- Steel base and various exterior color options available
- Several height options available to accommodate varying space needs
- Various specially designed compact Base station antennas available for Comshels

**New 35' Dual Door Comshels™**

Sinclair's legendary Comshel™ shelters are now available in 35 feet height. The new Comshel™ 35-W has a cedar base frame and two entrances to offer optional access during periods of heavy snow.

Sinclair's Comshel has been used for years to shelter communications systems from hostile environments in remote locations. It has proven itself able to withstand strong winds and a build-up of radial ice. Installations, as long as they are powered properly, can be left for years.

The durability and longevity of a Comshel installation means savings in service and replacement of equipment.

The basic composition of the Comshel is fiberglass roving with cloth and mat as reinforcement for a thermoset resin. Base frame made of grade No.1 timber (NLGA standard) provides excellent structure strength. The base selection includes a layer of polyurethane foam that provides excellent thermal insulation and adds to the strength of the structure. The Comshel has many superior features:

- sections nest for easy shipping
- smooth dark green gel-coat surface and round design sheds ice \*\*
- rock anchors help withstand high winds
- bullet-resistant shell
- access door securely bolted to base
- custom construction
- Sinclair service and expertise

\*\*Note: The standard color is dark green, other color options are available at a premium. Please contact your Sinclair Sales Representative for more information.
