

**Transmitter Combiners** Low Band, Aviation, and VHF Transmitter Combiners **TJ2 Series** 

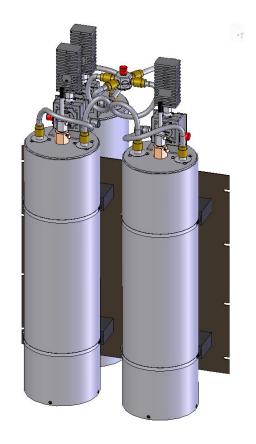

A Norsat Company in Norsat

TJ2113-3 Combiner, 3 channel, 7" cavity-ferrite, single stage isolator, 148-174 MHz

- Three channel cavity-ferrite combiner in compact configuration
- · Single low-loss isolator
- · High Q bandpass cavity filters

Sinclair's 'TJ2' series cavity ferrite transmitter combiners are available in 2 or more channel configurations for use in systems from 132-174 MHz. Each channel on these combiners includes a low-loss single or dual-stage isolator and Sinclair-developed High 'Q' bandpass cavity filter. The 'TJ2' series utilizes very high 'Q' quarter wavelength cavities, and is especially suitable for close channel separations, typically 150 kHz.

All models are 19-inch rack mountable and can be retuned in the field with simple test equipment. The 'TJ2' series combiner can be easily expanded to 20 channels, and is the building block used in many Sinclair combining systems. High power, special filtering, and special mounting versions are also available. To select the combiner ideally suited to your application, please consult your Sinclair Representative.
