

TJ4233 Cavity-Ferrite Transmitter Combiner, 3 channel, 7" Cavities, 806-960 MHz

- Allows for minimum Tx-Tx spacings of 250 KHz
- Expandable for more channels
- High Q bandpass cavity filters with dual low-loss isolators
- Enclosed cabinet

Sinclair's 'TJ' series cavity ferrite transmitter combiners are available in 2- to 6-channel configurations for use in systems from 132-960 MHz. Each channel on these combiners includes a low-loss single or dual-stage isolator and Sinclair-developed High 'Q' bandpass cavity filter. The 806-960 MHz 'TJ' series utilizes very high 'Q' three-quarter wavelength cavities, and is especially suitable for close channel separations, typically 250 kHz. All models are 19-inch rack mountable. The 'TJ' series combiner is easily expanded to 20 channels, and is the building block used in many Sinclair combining systems. Common electrical specifications are shown below. To select the combiner ideally suited to your application, please consult your Sinclair representative. Sinclair has developed an extensive range of cellular combiners, designed to meet the operational requirements of both large and small cellular systems.
