How To Recreate The Look

Blonding can be a challenging and high-maintenance job at times. Lupe featured 2 techniques – (i) **backcombing technique**, and (ii) **backcombed microweave** technique to create a seamless blonding result.

Backcombing technique, if done correctly, is an effective blending technique. This technique gives a similar effect to as balayage.

TIPS for Backcombing technique:

The effect and amount of blonding achieved is influenced by:

- the amount of backcombing
- the amount of over-direction / elevation used on a section of hair
- where you start the backcombing in a section of hair

Backcombed microweave technique is the most natural and seamless effect that can be created when highlighting, a perfect technique that helps with a graceful grow-out.

TIPS for Backcombed microweave technique:

- Hold the pin of the pintail comb directly 90° from the head.
- Make tiny zig zag movements across the parting with short quick movements. The movement of the pintail should be like a pen scribbling zig zag patterns across the scalp.

For this blonding technique, Lupe's product choice is Color Space™ LIFT Silver Powder Lightener. **LIFT Silver Powder Lightener** can achieve up to a maximum 9 levels of lift. Once the silver powder lightener lifts hair to the desired level. Remove the product completely and shampoo 3 times. Rinse and apply a gloss formulated using Color Space™ **ZERO Ammonia-Free Permanent Hair Color** for enhanced shine and condition.
