Time Required: 15 - 20 minutes

First, please verify that your Wuxn WXR has the following firmware. Through the touchscreen make the selections; *Menu>Settings>Info*

## Update WuxnSlicer (Beta)

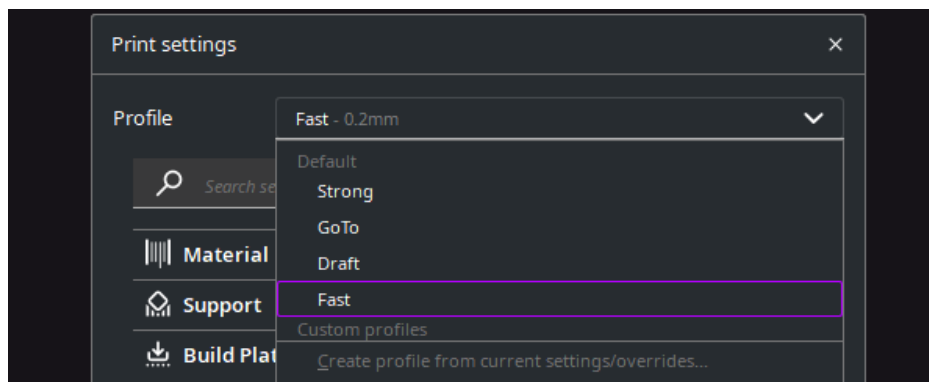

We've made significant updates and adjustments to WuxnSlicer and its print and machine parameters to match the increased print speed capabilities of Quake. To fully leverage these enhancements and achieve the best print quality, it's essential to upgrade to [WuxnSlicer 3.0.0-BETA](#).

Older versions of WuxnSlicer must first be removed. To ensure a clean start, please follow these steps to clear remnants from previous installs, instructions [here](#).

We apologize for any inconvenience and are working on making this process more straightforward in future updates.

Along with our new profiles, we have kept the old, beloved profiles. To experience the new Wuxn Quake speeds select the "Fast" profile prior to slicing.

Happy Printing!
