Be Ready "Before The Moment"

PIGGY-BACK SHOULDER STRAP

Use the included shoulder strap to "piggy-back" and counter-balance the Airport Navigator on the front of another roller. This technique allows you to carry extra weight more efficiently without the extra strain on your wrist.

Place the Airport Navigator in front of another roller. Extend the shoulder strap on both sides so that it can reach the retractable handle.

Place your hand through the shoulder strap "pass-through" and grab the retractable roller handle. Pull the handle up through the shoulder strap and lock the handle into position.

Tighten the shoulder strap on both sides to hug the Navigator in close to the additional roller. Tilt the additional roller so that the Airport Navigator is fully supported and lifts off the ground. If the Navigator slips down, tighten the shoulder strap.

LAPTOP SECURITY STRAP

Use the laptop security straps for quick access to your laptop

Detach the security straps for full access to the main compartment

TOP LID HOLD-UP

Access your gear quickly while you shoot by extending the retractable handle through the fixed handle on the top lid.

SECURITY STRAP TUCK-AWAY

Pull the blue tabs on each side of the main compartment to tuck-away your laptop security straps when not in use.
