

Handle Replacement Instructions – Airport International and Security V3

Step 1:

Start by taking a top-down photo of your divider and gear layout for reference when reassembling your bag. **Remove all dividers and set aside.**

Step 2:

Lift the interior bottom flap

Step 3:

Peel back each side of the interior sidewall and lift up the padded liner to expose the handle assembly.

Included with the kit:

Replacement handle and 3 mm hex wrench.

Other tools required but not included:

8 mm socket and ratchet, Phillips head screwdriver.

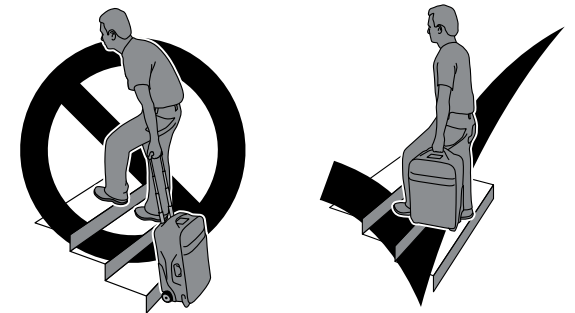

Step 4:

Using the included 3 mm hex wrench, turn the lower two hex bolts *counterclockwise* while holding each nut on the backside stationary with an 8 mm socket and ratchet (not included).

HANDLE USE

Due to the weight of video and photographic equipment, we recommend that you **do not lift the roller off ground or pull up stairs by the aluminum handle system**. Please use the fabric handle on top of the bag itself.

Step 5:

Using the included 3 mm hex wrench, turn the upper three hex bolts *counterclockwise* while holding each nut on the backside stationary with an 8 mm socket and ratchet.

Step 6:

Using a Phillips-head screwdriver, unscrew the four partially covered screws securing the handle assembly to the bag's shell.

Step 7:

Lift the handle up to remove it from the bag.

Set aside all hex bolts, plastic washers, metal washes, screws, and nuts for use during reassembly.

NOTE: The top right hex bolt is longer than the others and is used to attach the security cable to the handle assembly.

HANDLE INSTALLATION and REASSEMBLY

Handle installation is the same process you just went through, but in reverse.

Please note you should only lightly tighten each hex bolt to the point where the plastic washer starts to warp. If the washer does warp, turn the bolt counterclockwise until the washer is flat.

Be sure to reconnect the security cable as described in Step 5.
