Be Ready "Before The Moment"

Product Description:

The new and improved Digital Holster Harness V2.0 highlights the innovative designs Think Tank Photo has become known for. Some chest-mounted bags tend to sag or shift weight on very active photographers. The Digital Holster Harness V2.0 has six attachment points to each Digital Holster V2.0 to keep the holster snug against a photographer's chest. Photographers can keep their hands free for hiking, cycling, or skiing until they are ready to capture that peak action moment.

Key Features:

- Keeps a Digital Holster V2.0 snug against the chest
- Designed to keep bag stationary during extreme body movements
- Compatible with all Digital Holster V2.0 sizes
- Mesh back for ventilation and comfort
- Webbing End Roll-ups keep excess webbing slack neatly wrapped
- Fully adjustable, one size fits most
- Rugged straps and durable hardware
- "No Rhetoric" lifetime warranty

Specifications

SKU: 87453000 886 3 • Part Number: 886

- One size fits all
- WEIGHT: 10.7 oz (302 g)

1. Webbing End Roll-up
2. Fully adjustable straps

Be Ready "Before The Moment"

Rear view of the Digital Holster Harness V2.0. The wide, mesh back distributes weight evenly while ventilating for comfort.

To attach the Digital Holster Harness V2.0 to any size Digital Holster V2.0, first connect the shoulder straps to the metal D-rings at the top of the Digital Holster. Adjust the two shoulder straps as needed, estimating a comfortable height on the torso to wear the Digital Holster.

Next, connect the middle straps to the small upper webbing loops on the back of the Digital Holster V2.0. Note that the middle straps have a heavy duty elastic ring near the back. The elastic rings are what keep the Digital Holster snug against the torso. Lightly adjust length of the middle straps

Connect the waist straps to the small lower webbing loops near the bottom of the Digital Holster V2.0. Finally adjust all the straps for a proper fit. The middle and waist straps feature "Webbing End Roll-ups" that allow excess webbing to be rolled up then wrapped with hook-and-loop flaps so they stay out of the way.
