

UV Sterilizer Upgrade Kit For Stealth-RO100/200

The ultra violet sterilizer will kill all living bacteria and microbes and ensure safe water for your family and plants.

The UV lamp is rated for 12 months of continuous use. After that period a replacement of lamp is necessary.

Begin by snapping the 2 black clips onto the black membrane housing on your Stealth-RO. Then snap the UV filter onto the other end of the clips.

Attach the blue RO line from your Stealth-RO into one end of the UV filter. You will need to cut it to the length needed to make the bend up into the UV filter. The other piece of blue tubing can be attached to the other end of the UV filter and will be your final product line.

Attach the ballast to the UV filter and plug into a standard 100V wall plug

The UV filter does not have a particular direction the water must flow through so you can orient it in either direction. Extra tubing is available from your dealer or contact Hydro-Logic.
