

## **UV Sterilizer Kit For EvolutionRO 1000™ and Merlin-Garden Pro™**

**The ultra violet sterilizer will kill all living bacteria and microbes and ensure safe water for your family and plants.**

**The UV lamp is rated for 12 months of continuous use. After that period a replacement of the lamp is necessary.**

**You can mount the 2 black clips onto the support leg of the Merlin –GP (shown below). Then snap the UV filter into the clips.**

**Attach the blue RO line from your Merlin-GP into one end of the UV filter. You will need to cut it to the length needed to make the bend into the UV filter. The other piece of blue tubing can be attached to the other end of the UV filter and will be your final product line.**

**Attach the ballast to the UV filter and plug into a standard 110V wall plug**

**The UV filter does not have a particular direction the water must flow through so you can orient it in either direction. Extra tubing is available from your dealer or contact Hydro-Logic.**

**There is no way to mount the clips on the support leg of the Evolution-RO1000. The UV will have to be mounted in a separate location.**
