

ARCS

Automated Reclaimed Condensate System

by **HydroLogic**
PURIFICATION SYSTEMS

The Turn-Key HVAC condensate reclamation system for ZERO WATER LOSS

- Perfectly pH Balanced Product Water
- Ultra-Pure and Contaminant Free
- Zero Pathogens and Bacteria
- 2,880 Gallons Per Day Capacity

Using untreated condensate water for your plants?

The Problem:

Although low in TDS, condensate water:

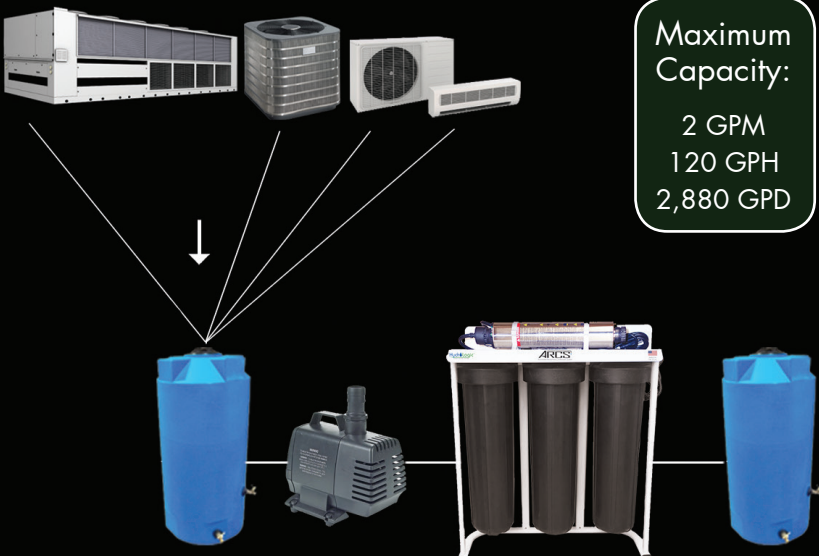

- Collects on contaminated climate control system coils
- Leaches heavy metals (from system coils) because it has a low pH
- Travels through dirty condensate lines collecting sediment, dust, bacteria and other pathogens

The Solution:

The HydroLogic Automated Reclaimed Condensate System (ARCS) works with any application that creates condensate water such as air conditioners and dehumidifiers, and successfully reclaims and purifies the condensate water that would either be contaminated or go down the drain.

The product water from the ARCS is perfectly pH balanced, ultra-low TDS and completely free of contaminants, pathogens and bacteria.

ARCS product water can be used for any application requiring pure water and is ideal for horticulture.

Turn-Key system includes: 4 stage filter, floor stand and 20' of tubing
