**WAIST BELT**<sup>TM</sup>

**We love paddle boarding so much, nothing beats it, though it is important to have a good understanding of safety, your surroundings and what to do in an emergency.**

**The Rapid Release Waist Belt is designed for free flowing water conditions and helps simplify the process of releasing yourself from your board/leash in an emergency.**

Now, sometimes in those moments we may not think clearly or have much time to react, that's why our Waist Belt has two Rapid Release toggles to make it super easy to use in a panic.

The Waist Belt has two Rapid Release toggles. The primary release option is on the buckle located directly at the front of the waist belt, simply pull the red toggle and the buckle releases and the belt can be removed.

The secondary release option is Velcro and is located to the left of the buckle. Should for whatever reason the Primary release option fail or a faster escape from the belt is required, the secondary toggle can be ripped with one strong pull and the entire belt will fall away.

**Another important design feature on all our leashes is the extendable webbed leash itself. The beauty of this is that the leash does not drag in the water when in use, this is important because it's entirely possible the reason you need to release your leash would be that it has got caught on something in the water. The elasticated leash helps avoid this all together.**

Just like The Original ESEA STRAP, the Rapid Release Waist Belt has the built in carry loop for your paddle board with the same handy, adjustable buckle on the nose loop which allows you to slacken or tighten depending on the shape of your paddle board. This is really useful and important to adjust to find that optimum position for carrying your SUP.

## BUILT IN CARRY STRAP

## HI VIS REFLECTIVE STRIP

A hi-visibility reflective strip will assist in any rescue operations in low visibility conditions and make you more visible to others whilst enjoying an end of day or early morning paddle.

## EMERGENCY RELEASE

PULL **RED** TOGGLE TO RELEASE BUCKLE

**DO NOT** TUCK IN EXCESS BELT LENGTH, INSTEAD, TRIM TO LENGTH OR LEAVE TO HANG.

PULL **RED** TOGGLE TO REMOVE ENTIRE BELT

ONE STRONG PULL WITH YOUR RIGHT HAND WILL QUICKLY RELEASE THE VELCRO ATTACHMENT.

PRIMARY RELEASE

R A P I D R E L E A S E

WAG

1

Remove loop from pouch

2

Extend leash & slide padding to centre

3

Adjust loop then slide over nose of board

4

Lift from knelt position onto either shoulder

# SIZE GUIDE

All our leashes are available in four size options and work on both hardboard and inflatable paddle boards.

Due to the vast array of paddle board shapes, sizes and varying user heights, it's not possible to have a one size fits all option.

That's why we have worked long and hard to create just four variations to choose from, to accommodate the majority of paddle boards.

The leash you need depends on the overall length of your board. (a bit like buying a pair of shoes!)

## Example:

LEASH	1	2	3	4
BOARD SIZE	9' - 9'10	9'11 - 10'8	10'9 - 11'6	11'7 - 12'6

If you don't already know the size of your board, measure the board from top to tail as pictured below.

Our size guide lists paddle boards up to 12'6, though our size 4 leash has been proven to work effectively on race/touring shape boards up to 14ft long.

If you are not happy with the distance off the ground that your board hangs when being carried, try adjusting either the nose loop and/or the white cord attached to the rail saver (where the leash attaches to the board) to find that optimum carrying position.

IMPORTANT SAFETY INFORMATION

# YOUR SAFETY

**It is important to take time to consider your surroundings before entering any natural water space.**

Respect the environment around us and understand your equipment.

This goes for leashes especially. There are different style leashes for different types of water.

We offer two options, a waist leash and an ankle leash.

IMPORTANT SAFETY INFORMATION

Our waist leash is designed for moderate, free flowing water conditions, where we feel it is necessary for the leash to be permanently out of the water and easily released in an emergency.

Our ankle leash is designed for flat water use such as lakes, shallow harbours and general recreational paddle boarding areas with low current.

We do not recommend using any of our products for white water conditions or surfing of any kind. There are other leashes on the market for both these specific activities.

We also strongly advise anyone who wishes to enjoy paddle boarding to do their own research on leashes and water safety, this will allow you to make an informed decision on what equipment to use and consequently feel more confident whilst on the water knowing you know what to do in an emergency
