

Human Brain ANATOMY

Imagine your brain as a super-duper computer inside your head. It has different parts, like puzzle pieces, and each part has its own job. Lets Learn:

Solve The **BRAIN PUZZLE**

One part at the front, called the "frontal lobe," helps you make choices and solve problems. It's like the captain of your brain.

The "parietal lobe" on top helps you feel and understand things like when you touch a soft teddy bear or a bumpy ball.

Your "temporal lobe" on the sides lets you hear sounds and music. It's like your brain's DJ, playing your favorite songs.

And at the back, there's the "occipital lobe," which helps you see all the beautiful colors, shapes, and pictures around you, just like magic!

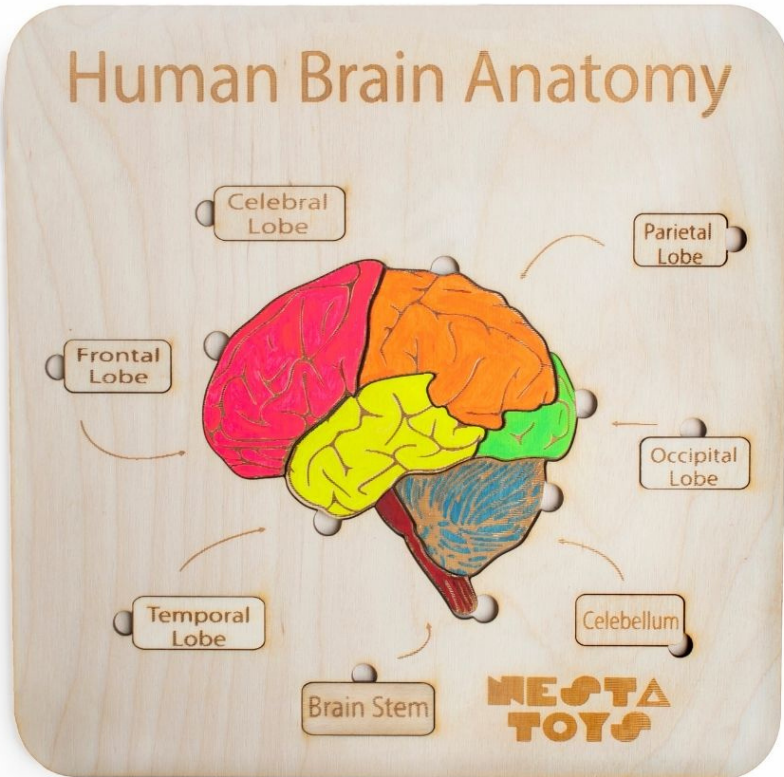

Deep inside, there's the "brain stem" that controls important things like your heartbeat and breathing, keeping you alive. It's like the brain's superhero protector.

Solve The **BRAIN PUZZLE**

And then there's the "cerebellum" at the back, like a little helper. It helps you balance when you ride your bike or jump and run with your friends.

All these brain parts work together like a fantastic team to help you learn, play, and have fun every day. So, always remember to take care of your brain by eating good food, sleeping well, and exploring the world around you. Your brain is super awesome and keeps you safe and sound!

Learn Through PLAY

Get your favorite colors ready, and start coloring each part of the brain puzzle with bright and vibrant shades. Let your imagination soar as you make the brain puzzle your very own masterpiece!
