

Life Cycle of a BUTTERFLY

Story

Imagine a tiny egg, like a hidden treasure on a leaf. Inside, a baby caterpillar is curled up, sleeping and growing. When it wakes up, it starts eating and munching on leaves, growing bigger and bigger. One day, it stops eating and forms a snug cocoon around itself. Inside the cocoon, it changes into a beautiful butterfly, like a superhero getting a new costume. When it's ready, the butterfly breaks free and flies with colorful wings, exploring the world.

Life Cycle of a FROG

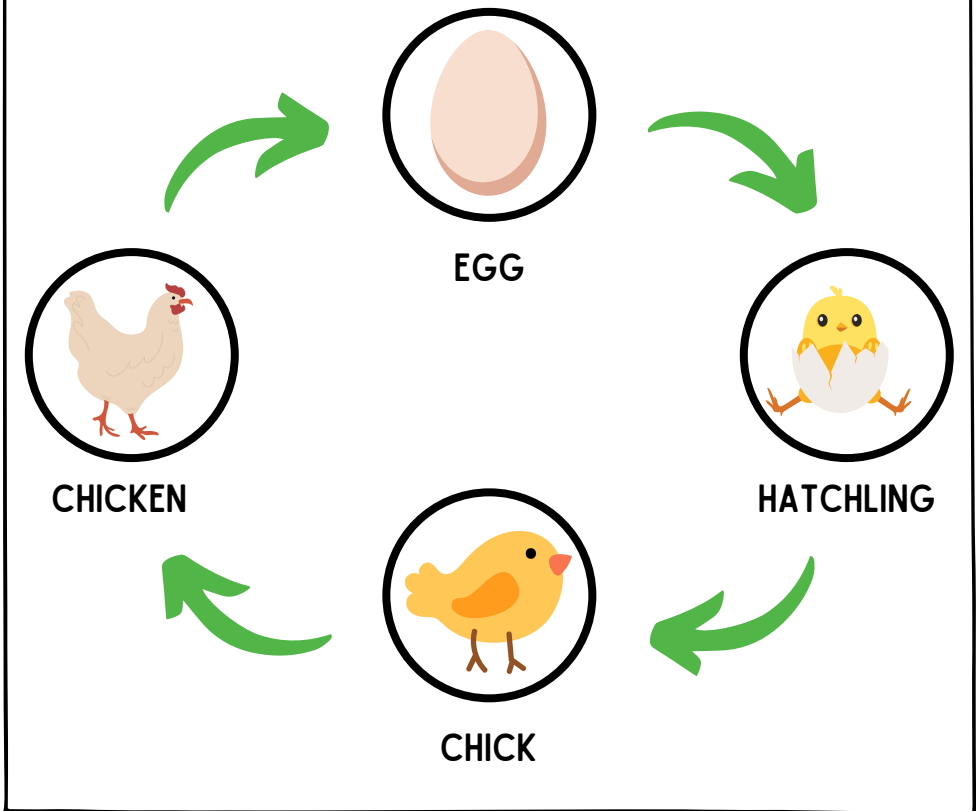

Story

In a quiet pond, tiny frog eggs appear, looking like clear jelly. Inside, a tadpole wiggles and grows a long tail. It swims around, just like a fish, and breathes underwater.

As it gets bigger, the tadpole starts to change. Legs sprout out, and its tail gets smaller. It's turning into a frog! Now, it can hop out of the water and breathe air. The frog grows up, catching insects with its long, sticky tongue.

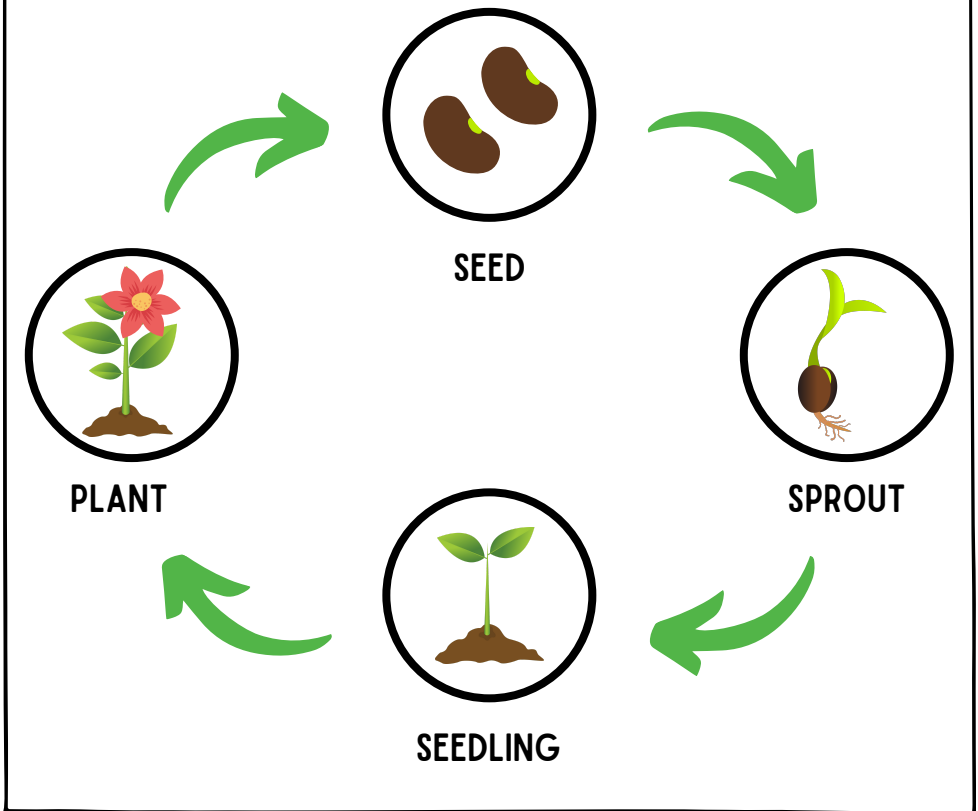

Life Cycle of a CHICKEN

Story

A mommy chicken, called a hen, lays an egg in a cozy nest. She keeps the egg warm with her body. After a few weeks, a cute baby chick pecks its way out of the eggshell. The chick starts as a fluffy ball of feathers. The chick grows by eating grains and drinking water, turning into a bigger chicken with colorful feathers. Chickens like to scratch the ground and find tasty bugs to eat. When they grow up, some hens might lay eggs, just like their mommy did, and the cycle starts again.

Life Cycle of a PLANT

Story

A tiny seed is planted in the soil by caring hands. With water, sunshine, and love, the seed begins to sprout. With time, the sprout becomes a big, strong plant with leaves that dance in the wind. Bees and butterflies come to visit, bringing some magic to the plant. The plant grows flowers that turn into yummy fruits and veggies we can munch on. And then, the plant's story begins again as it drops its seeds, like little surprises for the earth to discover.
