

AGAVE & ORANGE BLOSSOM MASK

with Amino Acids

This soothing and rejuvenating mask is packed with an array of skin-perfecting ingredients, including neroli to prevent breakouts, fruit enzymes to exfoliate and brighten, amino acids to diminish the appearance of fine lines, and agave nectar to leave skin feeling calm and looking bright.

ACTIVE INGREDIENTS:

Neroli is also known as bitter orange flower; it has a delightfully intoxicating scent and has regenerative properties that make it perfect for skincare, especially for those with minor scars, irritations and dark spots. It also has anti-bacterial and anti-inflammatory properties, making it a popular ingredient for preventing breakouts.

Agave Honey is actually the nectar of the agave plant. Much like honey, it has soothing and rejuvenating properties that make it an ideal skincare ingredient. In addition to calming angry, irritated skin, agave also provides skin-plumping moisture and brightening properties.

Agave americana Extract is naturally high in calcium, isoflavonoid, alkaloids, coumarin and vitamins B1, B2, C, D, K, and provitamin A. It also contains saponins, which are natural surfactants/cleaners that help break down dirt and oils on the skin. Agave nectar is an excellent humectant, wrinkle smoother and skin plumper.

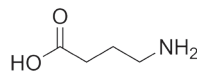

Papaya Enzyme, also known as papain, is found naturally in papaya fruit and offers natural exfoliating and brightening properties. Papain also promotes the skin's natural repairing processes, and helps protect skin against oxidative damage.

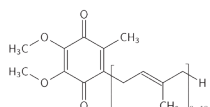

Pineapple Enzyme, also known as bromelain, is an enzyme derived from pineapple, known for its natural and highly effective exfoliating properties. It increases cell renewal by helping to gently remove dirt, debris and dead cells trapped within pores, and promotes softer, smoother skin and a more radiant complexion.

Glycyrrhiza glabra (Licorice Root) contains an active compound called glabridin, which inhibits tyrosinase, the enzyme that causes pigmentation in response to sun exposure. Licorice also contains liquiritin, which improves skin clarity by breaking down melanin. It also helps regenerate elastin and collagen.

GABA Amino Acid (also known as aminobutyric acid) is known for its naturally effective skin-smoothing properties, including the ability to diminish the appearance of fine lines and wrinkles.

Co-enzyme Q10 (CoQ10) helps stimulate the body and skin's natural production of collagen and elastin, two crucial components of healthier, firmer and younger-looking skin. It also has antioxidant properties that can provide protection against damaging free radicals.
