

bluelab®

New
essential
tool from
Bluelab

Pulse™ Meter

Measure root
zones. Faster.

Success by simplicity

10 seconds, 3 measurements.

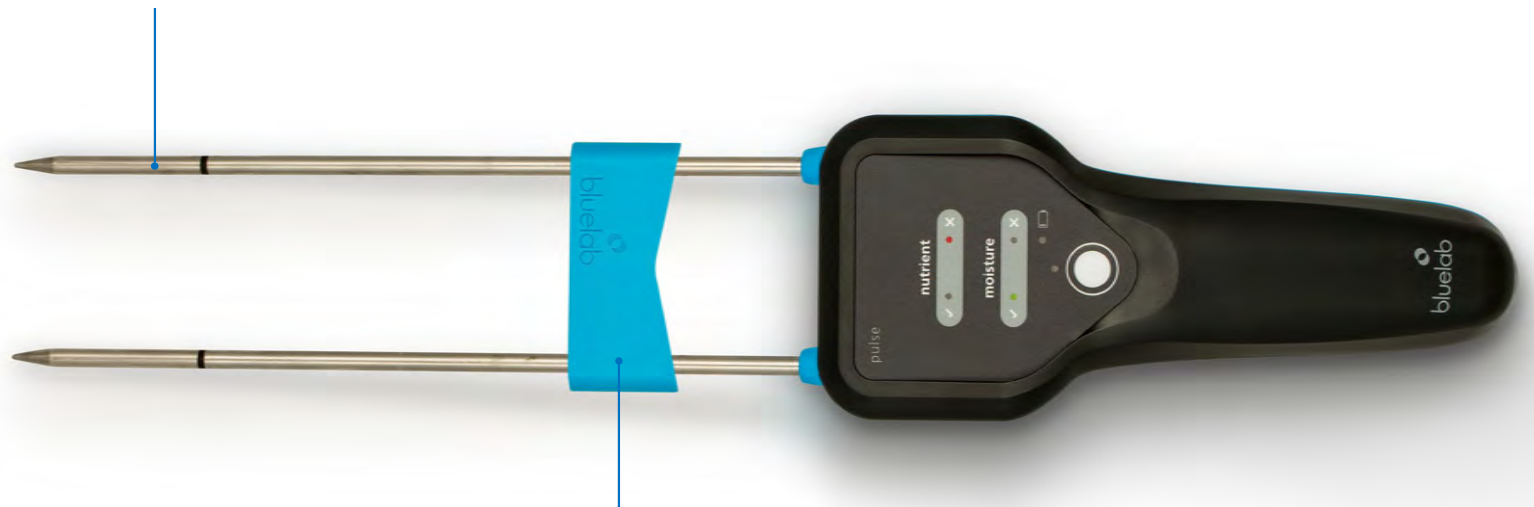

Direct moisture, EC and
temperature measurement. No
more pour-throughs, extractions
or kicking pots.

Real-world precision.

Robust 8" / 200mm stainless steel probes. Long format probes provide deeper insight.

Active probe tips. Radio frequencies emitted from the probe tips are used to measure and calculate moisture and EC.

Built-in depth gauge. The probe cover snaps onto the probes and slides to set a measurement depth.

All your data, always with you.

Powerful Pulse app. Auto sync,
view, analyse and store all your
measurement data in the Pulse
app, and export to email.

Available for Android now. iOS coming soon.

Go paperless.

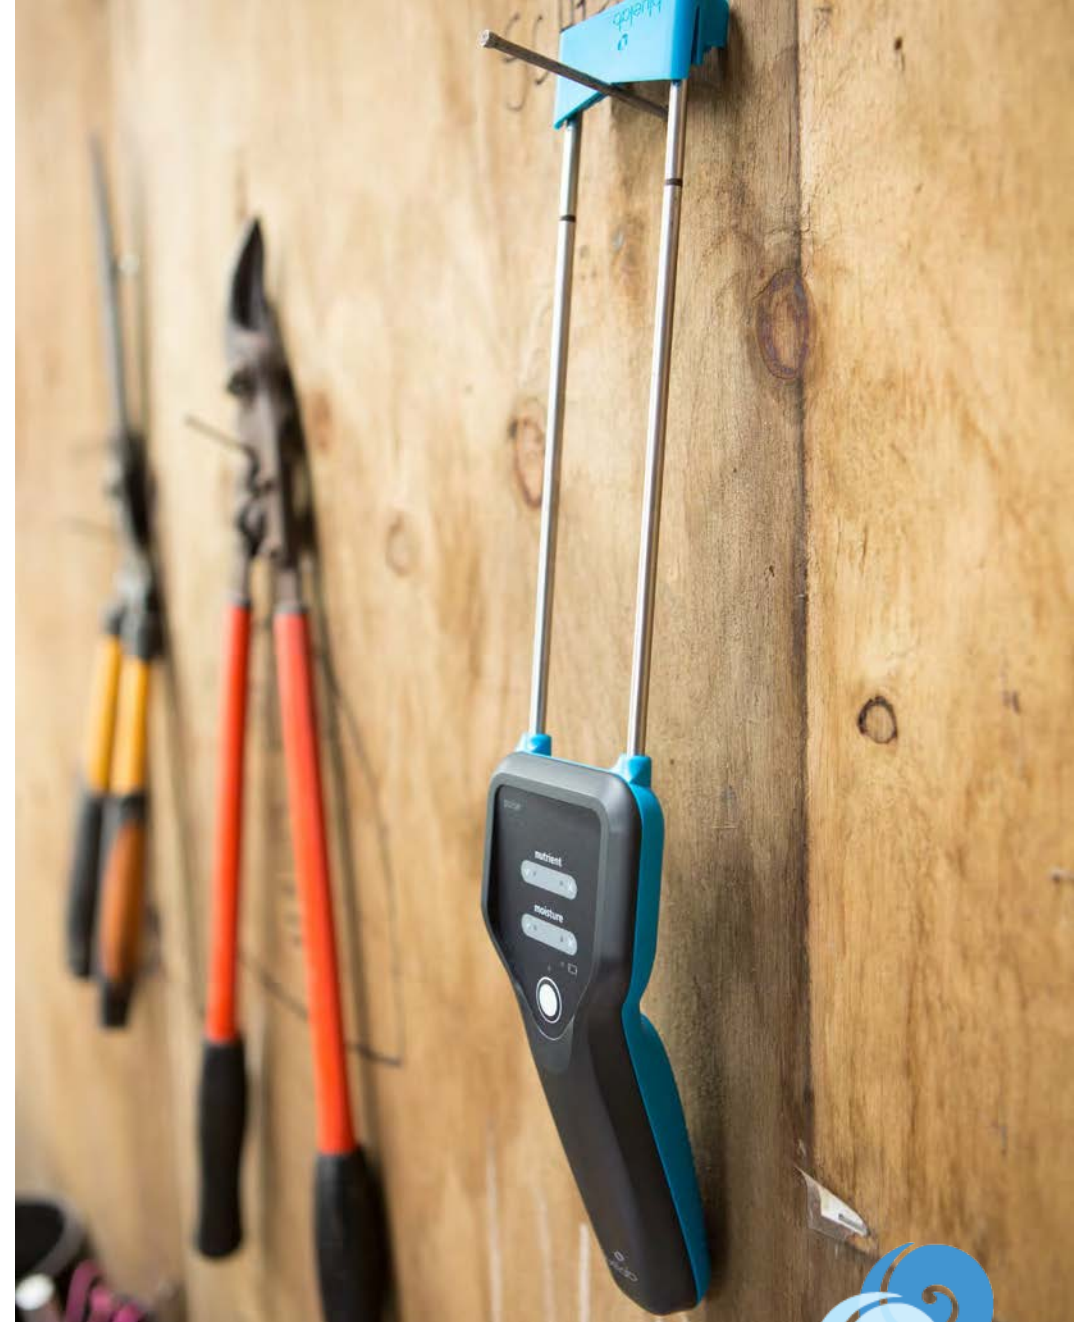

Record notes. Capture useful information such as measurement location or plant observations in the app.

One tool, many substrates.

Multimedia measurements.

Measure in a range of growing media including soils, potting mixes and coco coir blends.

All you need in a blink.

Introducing Blink™. Set target ranges, and get quick in or out-of-range indicators on Pulse to help you measure more, faster.

Pulse™ Meter

Take measurement
from reactive, to
proactive
