

ProLine™ Irrigation Controller

ProLine Controller

The Dramm ProLine Series of Irrigation Controllers offers a variety of advanced features in an easy-to-program, modular controller. With up to 4 independent programs that can run simultaneously or individually, ProLine can quickly & automatically water a wide variety of crops with different irrigation needs, with up to 8 start times per program. Each valve can operate from 1 minute to 9 hours 55 minutes. A seasonal adjust feature allows for irrigation cycles to increase or decrease throughout the growing season. The ProLine can be run manually, by valve, or program, as desired.

Featuring a modular, durable design, ProLine comes in a weather-tight enclosure and is available in 4, 8, 12, 16, 20 & 24 output versions. Smaller ProLine Controllers are upgradable to offer more outputs with the addition of output modules.

With the addition of the SmartLink monthly service and an air-card upgrade, ProLine can be programmed over the internet from anywhere. The SmartLink App allows the user to view programs, see current irrigation events and modify them at any time.

The ProLine offers ease & flexibility, allowing for growers to automate their irrigation & still maintain control.

Specifications

- 4 Programs to determine start time
- 8 Start times per program
- Stacked or concurrent program operation
- Manual start by valve or program
- Zone-to-zone delay programming

- 120v, 60Hz with prewired power cord
- Lightning protection
- Non-volatile memory retains programming without battery
- Expandable to 24 outputs
- Power, short, and fault diagnostics
- 2 year limited warranty
