

Reduction of defensive reactions during girthing

How to put on the Equi-Soft® girth/pad correctly: Make sure that the pad completely covers the girth, especially on the front to protect the horse's skin. Always tighten the girth by having the buckles in the same holes on both sides so that the girth is symmetric on the horse's body. Do not tighten the girth too much, otherwise, the chest will not expand properly and the function of the girth will be limited.

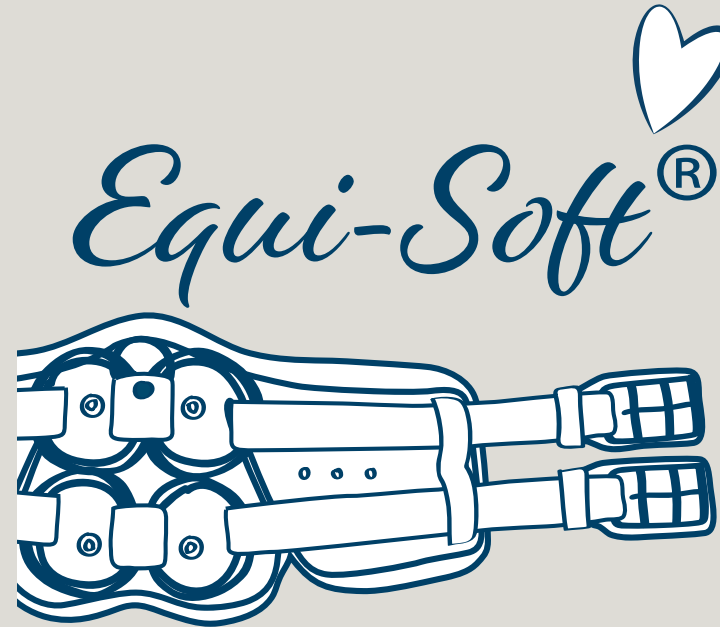

Considerably lower heart rate

A comparative study of different girths certifies: All horses, without exception, had a lower heart rate with the Equi-Soft girth.

Unrestricted expansion of the chest

The elastic rings allow your horse to breathe better. They expand and contract with the horse's rib cage and maintain an even and comfortable tension.

Perfect girth pressure distribution

The Equi-Soft girth has an ergonomic shape and is flexible. This special design provides freedom of movement to your horse and significantly reduces girthingness.

Different styles available

The special design allows to change the pad in seconds. The girth exists in many different colors and lengths. Pads are available in three different materials.

Dressage

All versions of the Equi-Soft® Girth and its pad

Lengths:
40 cm, 45 cm, 50 cm,
55 cm, 60 cm, 65 cm,
