

How to choose the right size of eyewear ?

1

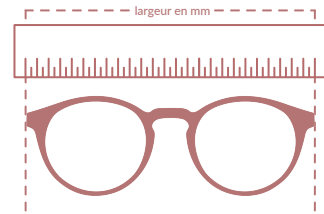

Taking measurements .

MOST IMPORTANT THING = THE WIDTH OF THE EYEWEAR

Measure a pair of sunglasses or optical eyewear that fits you the best

OR

In front of a mirror, place a ruler on your forehead above the eyebrow line and measure the width between the ends of your temples.

2

the size chart .

Width measured in mm*	<130 mm	131-140 mm	141-150 mm	>150 mm
Sunglasses / size	S	S	M	L
Optical eyewear / size	S	M	L	L

** a difference of 1 to 2 mm more or less can be ignored **

3

CARLOTTI tips .

Sunglasses are usually worn wider than optical eyewear.

It is also possible to achieve an oversized look by going up a size.

The size can also vary depending on the shape chosen: butterfly or rectangular eyewear is usually wider than round ones.

The temples can be adjusted in our boutiques or at any optician's to achieve a perfect fit on the face.
