

PILOT AVIONICS

PILOT PA200X 2 Place MiniCom

The Pilot PA200X is identical to the PA200 with the exception that it has a socket allowing the connection of a 2 place expansion module.

The Pilot PA200X MiniCom breaks new ground in size, ease of operation and price in 2/4 place voice activated portable intercoms.

All you have to do to use your Pilot PA 200X MiniCom is place a 9 volt battery in the battery compartment, plug in your headsets and turn the volume control to on. The squelch knob is used to compensate for background noise levels and should be set so that the intercom's voice activation turns on the intercom audio when you speak at a normal voice level.

The microphone jack on the intercom lead incorporates a Y-block with provision for two press-to-talk switches, one for the pilot and one for the co-pilot. Bear in mind that most press-to-talk switch leads have a male microphone jack as well as a female microphone socket. When using a press-to-talk switch with the PA 200X MiniCom, the male microphone jack is plugged into the back of the Y-block. The female microphone socket is not used (the microphone jack from your headsets being plugged directly into the intercom). Please note, that both pilot and co-pilot mics are "live" at all times meaning that when either press-to-talk switch is pressed voice from both pilot and co-pilot will be transmitted.

To turn the PA200X into a 4 place intercom all you need to do is purchase a PA200EX expansion module which comes complete with a 1.6m lead to connect the two units.

Your PA200X should have come with the following components:

PA200X MiniCom

Specifications and Features

- Expandable to 4 places
- On/Off volume control
- Adjustable squelch circuitry
- Fail safe capability
- Y-adapter for two press-to-talk switches
- Powered by 9v battery
- Up to 24 hours use on one battery
- Measures 5.7cm x 3.5cm x 7cm
- Weights only 8oz (227gms)
- 3 year warranty
