

STEEL BUILD MASTERS

'Erections that last'

Steel Build Masters (SBM) are market leading suppliers of modern and contemporary steel framed buildings and connected construction services to the **Domestic, Industrial and Commercial** sectors. Based in Bishop's Stortford, on the Hertfordshire and Essex border, we are ideally placed to offer a comprehensive service locally and nationally.

Steel Build Masters have led the way in steel building for more than a decade. During this time we have assembled the most experienced teams in the industry, sourced the highest quality materials available and built the most trusted steel building brand - known for its solutions to any steel construction project.

Our range of steel buildings can be designed to any size, specification or budget to suit your needs, each one fully engineered specifically for the site location to meet all mandatory building regulations and codes.

Every building is available as a **simple self-build kit** or **complete turnkey package** in a wide choice of options to include - PIR Insulated Steel Cladding, Timber Cladding, Insulated Skylights, Steel Fire/PA Doors, Automated Roller Shutter Doors, Mezzanine Floors, Steel & PVC Guttering, Double Glazed Windows, Partition Walls, Fire Proofing, Interior Fit Out and much more.

'Erections that last'

*"From start to finish,
your needs are our number one
priority. We are here to support
you through the entire process."*

Our positive, innovative thinking and can-do approach, coupled with the collaborative way we work with clients and contractors, enables us to deliver a wide range of solutions at virtually any scale. Whether large or small, we are committed to provide the highest level of technical and practical expertise to all projects.

NEW BUILD

We supply a comprehensive range of steel framed buildings each designed and erected to meet your individual requirements and budget.

Employing pre-engineered cold rolled steel, rigid steel joist, structural masonry, and other state-of-the-art building technologies, we design and fabricate fully engineered steel framed buildings to any size - from domestic garages and workshops through to large warehouses or entire industrial park developments.

Our expertise and experience in these specialised areas allows us to recommend the most timely and cost effective methods of steel construction from custom self-build kits through to full turnkey projects.

Incorporating site survey, design, planning, groundworks, frame erection, roofing, cladding, roller shutter doors, fire doors, fire proofing and all finishing touches inside and out - **our turnkey construction service is second to none.**

With an extensive range of steel and timber cladding options, roller shutter doors, fire doors, personnel security doors, mezzanine floors, staircases, partitions and bespoke interior fit out options - **we can provide everything you need to compliment your building.**

'Erections that last'

“We involve our best thinkers at the front-end of projects to share knowledge and create tailored solutions.”

With safety and industry regulations at the forefront of everything we do, our teams of construction experts can revamp your building, giving it a new purpose. We will take full responsibility for the project, handling all stages from planning and designing, to refurbishment and final completion.

REFURBISHMENT

Refurbishment of your existing steel building can provide a new lease of life and offer additional space at a fraction of the cost of a new building.

Many of our customers have existing facilities to which we provide building additions and/or refurbishment to improve the working environment, increase rental income or simply transform general aesthetics to boost a brand image. In fact there is very little that can't be done to an existing metal building in a more economical way than other building types.

Typical refurbishment projects include asbestos removal and re-cladding, over-cladding existing asbestos roof, extending with extra bays, lean-to side extensions, improving thermal and acoustic efficiency with composite steel cladding, adding second floor offices/storage with a mezzanine, adding natural daylight with new skylights, replace/upgrade leaking gutters; or replacement PA doors, fire doors, roller shutter doors, and windows. We can colour match and profile match to your existing building for a seamless improvement.

Each project is managed by an experienced site supervisor - **keeping disruption of your day-to-day operations to a minimum.**

'Erections that last'

“Our refurbishment and fit-out work is renowned for being meticulously planned, immaculately executed and incredibly cost-effective.”

When your building needs urgent repairs we understand how important efficiency and reliability are. Whatever aspect of maintenance your building needs, we will work with you to devise a planned maintenance program, to include any follow-up remedial work required for long term assurance.

MAINTENANCE

Our flexible steel building maintenance programme provides a fast and efficient repair or replacement service to detect and correct issues while they are still minor.

When it comes to constructing industrial, commercial and retail buildings, steel is undoubtedly one of the most popular materials to use, mainly due to its durability and strength, as well as the fact that it requires very little maintenance. Although your building is built to last, some maintenance work is still essential for all steel buildings to improve lifespan and maintain safety.

Regular maintenance can save you money by keeping repair costs to a minimum, preventing further deterioration of the building and reducing the potential for downtime due to larger repairs.

Typical small works maintenance projects include single flashings replacement, fix leaking gutters, repairs to damaged cladding, fix leaking roofs and skylights, fix transom door closers, replace locks and door furniture, setting roller shutter door motors.

We offer flexible building maintenance programs tailored to your individual budget and needs - **we also offer one-off small works maintenance.**

'Erections that last'

“Keeping buildings safe, secure and operational is one of the best investments a business can make.”

www.sbmdirect.co.uk. Inspiration to-go. Everything you need to improve and maintain your steel building, available to order direct online, mobile or tablet. Order 24/7 from the comfort of your office or home or even out and about with fast and efficient same-day or next-day dispatch on all our items.

ACCESSORIES

To ensure an ongoing quality of service we stock a wide range of premium steel building accessories that will make your building unique and functional.

The combination of quality construction and affordability makes our steel building accessories and steel building replacement parts exceptional value.

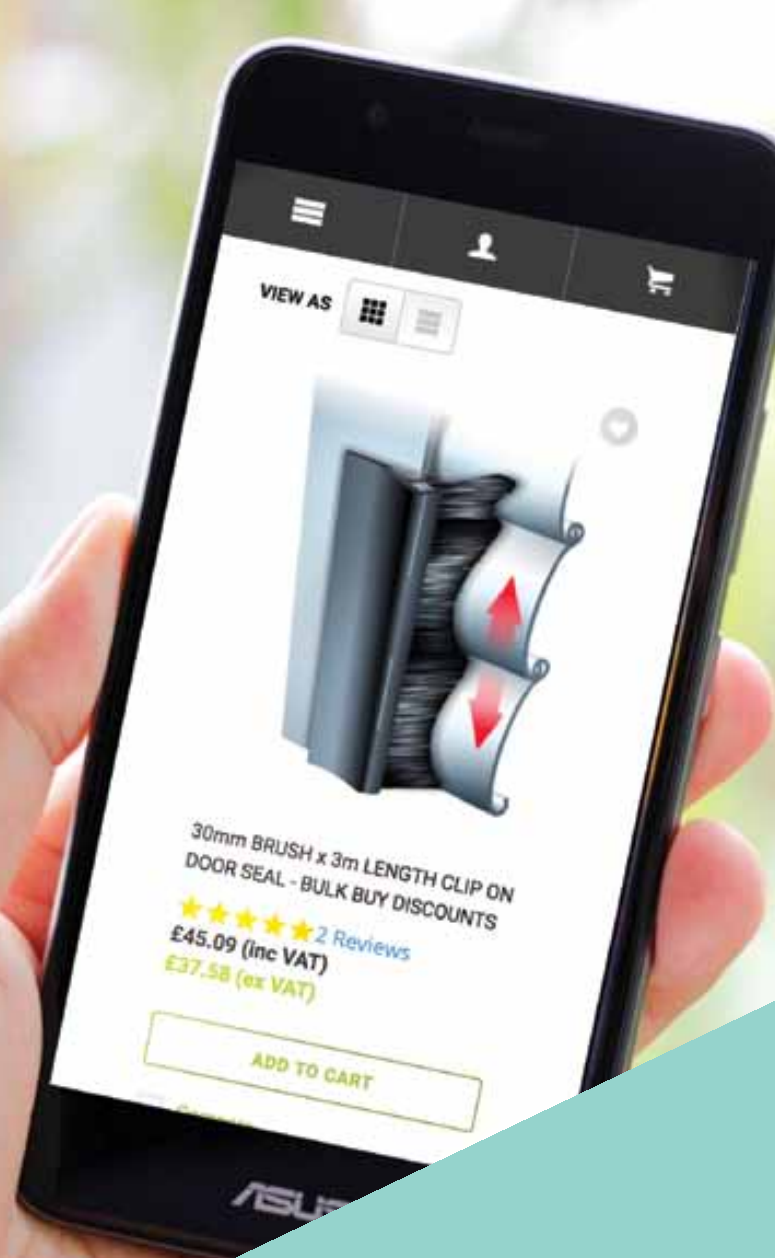

Accessories range from security products, roller shutter doors, steel PA doors, steel fire doors, vehicle and pedestrian barriers, industrial safety features, weather seals, industrial brush strips and door seals through to individual replacement parts, roller shutter door motors, remote controllers, keypad entry and much more all available from our online store at **www.sbmdirect.co.uk**.

Our friendly staff are on hand to offer expert help and advice selecting the right products with same day dispatch to ensure a fast and efficient service. Plus we can also source specific hard-to-find parts and recommend suitable replacements or upgrades.

Our extensive knowledge also means we are on hand to offer technical advice and support fitting parts.

'Erections that last'

“Our expertise doesn’t end with the design and construction of your building, it extends far beyond to cover every individual element.”
