

# AFTERCARE GUIDE

Cleaning and maintaining your Nordic Ways Steam Spa is quick and easy. If you take good care of it, your spa will continue to look and perform great while helping you sweat for many years to come.

## General Care + Pro Tips

### Follow the usage instructions

Improper use can damage your spa, or worse, cause injuries. Always use your spa safely.

### Beware of the steam nozzle

To protect your spa against damage from the steam input, position the white steam input nozzle so that it is facing up and towards the back of the wall of the spa at a 45 degree angle. **NEVER** have it positioned directly at you or touching the special silver lining of the spa (it can cause bubbling). **We also find this method produces the best steam.** Checkout the pictures below for how to position the nozzle perfectly.

### Pro-tip for faster drying

Unzip the sauna on two sides and tip the sauna against the wall so it is leaning on one corner. This will allow the bottom of the sauna to dry quicker as well as any condensation that formed on the floor from the sauna.

### Your steamer is your friend. Take care of it!

Use distilled or filtered water in the steamer, as tap or unfiltered water may eventually leave mineral deposits. To help protect against mineral deposits, empty the remaining water of the steamer shortly after leaving the steam spa and then dry it completely with the lid off.

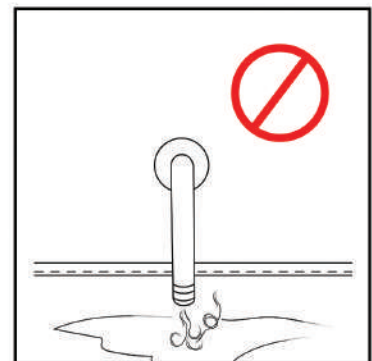

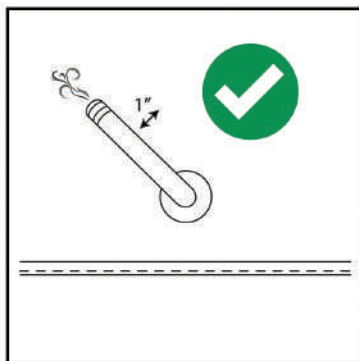

### Keep it fresh

Wipe down the joints of the spa frame with a dry towel, empty & rinse the sweat liner with water, and allow to dry fully after each use. However, due to the heavy steam production of this unit, discoloration of the metal piping may naturally occur and this is normal.

### How to correctly position the steam input nozzle:

### Usage & Safety Instructions:

Your Signature Steam Spa is your own personal at-home spa experience. Just as you take precautions when going to a steam room or traditional sauna, those safety measures still apply here. Prior to hopping in your new Steam Spa for the first time, please consult your physician and read the safety section of our manual, which you can find on our website.
