To Whom it may concern,

GMO statement for Grow Sow Greener Ltd.

The seed supplied to Grow Sow Greener have not been, to the best of our knowledge and belief, subject to any transgenic GM techniques outlined by EC Directive 2001/18/EC during their multiplication, production or processing.

Our seed stock is produced in open fields under natural conditions which includes the free movement and circulation of pollen. While our suppliers and growers take every action to minimise risks, including seed production isolation distances, it is not possible to definitively avoid the adventitious presence of GMO or to guarantee seed lots are completely free from traces derived from GM plants.

As a result, we can unfortunately offer no guarantee that our seed is GMO free and accept no liability arising from the adventitious presence of traces of GMO in non-GM seed. This in our opinion is a sad and dangerous state of affairs and GMO production should be banned or at the very least confined to environmentally sealed facilities to stop possible unwanted contamination. We encourage you to lobby the relevant govt body and your local member to this end.

Yours faithfully
